Laparoscopy and Thoracoscopy in Small Animals
Laparoscopy and Thoracoscopy in Dogs and Cats

The 5 mm HOPKINS® telescope from KARL STORZ provides the small animal practitioner with bright, enlarged views of all abdominal and thoracic organs through a tiny incision.

Biopsy and/or aspiration of the following organs can be achieved: liver, kidney, pancreas, spleen, gall bladder, lymph nodes, lung and gastrointestinal tract.

Endoscopic photographs courtesy of Dr. David Twedt, Colorado State University.
Ancillary instrumentation, such as biopsy forceps, graspers and scissors may be placed through additional 5 mm portals. This allows not only documentation and biopsy of abnormalities, but also a number of therapeutic minimally invasive surgical interventions including the following:

- Cryptorchid castration
- Prophylactic gastropexy
- Ovariohysterectomy
- Cystotomy
- Jejunostomy/gastrostomy tube placement
- Adrenalectomy
- Pericardectomy
- Partial lung lobectomy
- Nephrectomy
- Insulinoma removal
- Partial pancreatectomy
- Resolution of gastric dilatation with volvulus
- Lap-assisted cystostomy
- Lap-assisted cystopexy

Laparoscopy and thoracoscopy will vastly improve your diagnostic and surgical accuracy, while reducing patient recovery time and improving client satisfaction.
