ENDOSCOPES FOR ANESTHESIOLOGY AND EMERGENCY MEDICINE

5th EDITION 2/2012 US
Important information for U.S. customers

Note:
Certain devices and references made herein to specific indications of use may have not received clearance or approval by the United States Food and Drug Administration. Practitioners in the United States should first consult with their local KARL STORZ representative in order to ascertain product availability and specific labeling claims. Federal (USA) law restricts certain devices referenced herein to sale, distribution, and use by, or on the order of a physician, dentist, veterinarian, or other practitioner licensed by the law of the State in which she/he practices to use or order the use of the device.

Important Notes:

Endoscopes and accessories contained in this catalog have been designed in part with the cooperation of physicians and are manufactured by the KARL STORZ group. If subcontractors are hired to manufacture individual components, these are made according to proprietary KARL STORZ plans or drawings. Furthermore, these products are subject to strict quality and control guidelines of the KARL STORZ group. Both contractual and general legal provisions prohibit subcontractors from supplying components manufactured by order of KARL STORZ to competitors.

Any assumptions that competitors’ endoscopes and accessories are acquired from the same suppliers as the KARL STORZ products are not correct. Moreover, endoscopes and instruments provided by competitors are not manufactured according to the design specifications of KARL STORZ. This means it cannot be assumed that these endoscopes and accessories – even if they look identical on the outside – are constructed in the same manner and have been tested according to the same criteria.

Standardized Design and Labeling

KARL STORZ participates both in national and international bodies involved in the development of standards for endoscopes and endoscopic accessories. Standardized design and development therefore have long been implemented consistently by KARL STORZ. The user can rest assured that all products by the KARL STORZ group have been designed and constructed not only in compliance with strict internal quality guidelines, but also with international standards. All data relevant for safe use, such as viewing direction, sizes and diameters, or notes regarding sterilization of telescopes, are applied to the instruments, have been formulated according to international standards, and therefore provide reliable information.

As we constantly seek to improve and modify our products, we reserve the right to make changes in design that vary from catalog descriptions.

Original or Counterfeit

KARL STORZ products are name brand articles renowned around the world and represent the state of the art in important areas of healthcare. A large number of “copy cat” products are currently being offered in many markets. These products are designed intentionally to resemble KARL STORZ products and use marketing strategies that at least point out their compatibility with KARL STORZ products. These products are by no means genuine products, since genuine KARL STORZ products are sold worldwide exclusively under the name of KARL STORZ, which appears on the packaging and the product. In the absence of such labeling, the product is not from KARL STORZ.

KARL STORZ, therefore, is unable to ensure that such products are actually compatible with genuine KARL STORZ products or can be used with them without injury to the patient.
KARL STORZ Endoscopy-America, Inc.

TERMS AND CONDITIONS

The following terms and conditions (“Terms”) apply to the acquisition of KARL STORZ products.

1. ORDERS. Orders are to be placed with the Customer Support Department or sales force of KARL STORZ Endoscopy-America, Inc. (“KARL STORZ”); however, orders will only be accepted by KARL STORZ’s Customer Support Department located in California or Massachusetts. In the event of any conflicting, inconsistent and/or additional provisions in a customer purchase order or other document, these Terms will supersede and prevail and such conflicting, inconsistent and/or additional provisions shall be of no force or effect; KARL STORZ hereby objects to such other provisions or terms proposed by customer. By accepting delivery of products from, and/or the performance of services by KARL STORZ and/or by paying for same, customer accepts and agrees to these Terms, all of which constitute the sole and entire agreement between KARL STORZ and customer.

2. PRICES. Prices are subject to change without notice. Nevertheless, prices in effect at the time that an order is accepted will prevail; provided, however, that quotations, including pricing therein, are valid until the expiration date reflected on the quotation. All applicable taxes, shipping and/or handling charges, will be added to the invoice. If customer is tax exempt, customer shall provide a tax exemption certificate for the “sold to” entity at the time of issuance of the purchase order under these Terms.

3. SHIPPING. Shipments are F.O.B. shipping point, shipping and handling prepaid by KARL STORZ and added to the invoice. However, KARL STORZ will utilize customer-designated third party freight programs for shipment and payment when requested by customer. In such case, customer is solely responsible for all third party freight charges, KARL STORZ handling charges and any loss or damage to products during shipment. If use of a customer-designated third party freight program is not requested by customer, and any loss or damage to products occurs during shipment, KARL STORZ will replace such products at no additional cost. All shipments should be carefully examined upon receipt and, if a product is damaged, customer must promptly notify KARL STORZ of the nature and extent of the damage and return such product to KARL STORZ in accordance with the “Return Policy” below. If shipments are received short, customer must promptly contact KARL STORZ’s Customer Support Department. KARL STORZ may make partial shipments on any order with customer’s authorization.

4. PAYMENT. Invoices are due and payable upon receipt, net 30 days from date of invoice, which shall not be earlier than the date of shipment. Invoices will be issued on authorized partial shipments and are payable as set forth in this section. A finance charge equal to 1-1/2% per month or the maximum amount allowed by law, whichever is less, may be assessed on all balances outstanding for more than 30 days. Any and all collection expenses, including reasonable attorneys’ fees, incurred by KARL STORZ to secure payment of any sums due from customer and/or to effectuate repossession of products purchased from KARL STORZ but not paid for will be borne by customer. Amounts payable to KARL STORZ for the purchase, lease or rental of products and/or the provision of services are not subject to withholding, set-off or counter-claim under any circumstances without the prior written consent of KARL STORZ.

5. SECURITY INTEREST. Until customer has paid KARL STORZ in full for all products purchased pursuant to an order, KARL STORZ shall have, and customer hereby grants to KARL STORZ, a security interest in all products purchased pursuant to such order for security payment of the entire purchase price for all products sold, shipped and delivered to customer pursuant to such order and all costs, expenses or other charges relating thereto which are payable by customer to KARL STORZ.

6. RETURN MERCHANDISE AUTHORIZATION PROCESS. A return merchandise authorization (“RMA”) must be obtained from KARL STORZ’s Customer Support Department prior to sending any products to KARL STORZ for any reason. When contacting KARL STORZ for an RMA, the Customer Support Representative must provide with: (a) the applicable P.O. number; (b) the KARL STORZ catalog number and, if applicable, the serial number for each product; and (c) the reason for the return. KARL STORZ will not be responsible for products returned without an RMA. Returns must be carefully packed and shipped pre-paid to KARL STORZ, Attn: RMA number. KARL STORZ’s Customer Support Department will provide the return address and the RMA number. In order to prevent the transmission of disease to the medical facilities’ and/or KARL STORZ’s personnel, all opened products must be cleaned and then sterilized and/or disinfected before sending to KARL STORZ, which reserves the right to return unclean and contaminated products to customer. Additionally, if any product becomes damaged and is not immediately returned for repair or exchange, KARL STORZ assumes no responsibility or liability for customer’s continued use of that damaged product. KARL STORZ does not guarantee the performance of, and may decline to repair or accept for repair/exchange, any product that has been repaired, modified and/or altered by any person or entity other than KARL STORZ or a KARL STORZ authorized repair facility.

7. RETURN POLICY. Full credit will only be issued for products that are received by KARL STORZ within 120 days of date of shipment (“Ship Date”) so long as such items are unused and in resalable condition. If products are received by KARL STORZ more than 120 days after the Ship Date, KARL STORZ may, in its sole and absolute discretion, either refuse acceptance of the returned products or require payment of an inspection fee of up to 25% of the invoiced price of the product, which will require a separate P.O. number. Shipping charges will be reimbursed, inspection fees will not be charged and full credit will be given if the return was due to a shipping error on the part of KARL STORZ. Customer must follow the RMA procedure set forth in the “Return Merchandise Authorization Process” above to return products for credit. The following products may not be returned for credit or exchange: (a) products held longer than 120 days from Ship Date (except as provided above); (b) sterile packaged products where the package is opened and/or damaged; (c) products identified and purchased as discontinued products; (d) instruments that are etched or engraved by customer; (e) products damaged by customer; and (f) used products.

8. WARRANTY POLICY. This section (“Warranty Policy”) applies to all warranty repairs and exchanges. All products are warranted to be in good working order and free from defects in workmanship and materials on the date of shipment and continuing for a period of one (1) year thereafter, unless otherwise specified in a quotation or product specific literature. All repairs made under this Warranty Policy shall be free from defects in materials and workmanship for the remainder of the original warranty period (if any) or 90 days, whichever is longer. To submit a warranty claim, customer must follow the RMA procedure set forth in the “Return Merchandise Authorization Process” above. Customer must return the defective product within 30 days of issuance of the RMA.

For all warranty claims submitted within the first 30 days of the applicable warranty period (“Advance Replacement Period”), a replacement product will be provided to the customer prior to receipt of the product subject to such warranty claim. KARL STORZ will notify customer if the warranty claim is not valid. In such event, customer must submit a purchase order for the replacement product including any shipping and handling costs. Some limited product categories may qualify for a longer Advance Replacement Period to be confirmed by KARL STORZ’s Customer Support Department at the time of issuance of the RMA. For all warranty claims submitted after the Advance Replacement Period, KARL STORZ shall evaluate the warranty claim following receipt of the product from customer and, if valid, shall at its sole discretion either repair or replace the product at no charge to the customer. KARL STORZ will notify customer if such warranty claim is not valid and provide an estimate of the repair cost. In such event, customer must submit a purchase order for the repair.

KARL STORZ ENDOSCOPY – AMERICA, INC.

PI-00038-11.0 (07/2019)
Damage which might arise or be caused, whether by customer or by any of the users of the products provided by KARL STORZ, as a result of, in connection with, or otherwise attributable to the following is excluded from all product and service warranty coverage: (a) misuse, abuse, mishandling and/or improper operation and/or storage; (b) repairs, servicing, modifications and/or alterations performed by any person or entity other than KARL STORZ or an authorized repair facility of KARL STORZ; (c) use in combination with adapters, accessories and/or equipment from other manufacturers or used in combination with or on equipment for which such products are not intended and are otherwise intended to be used; or (d) a failure to comply with power and grounding specifications provided by KARL STORZ.

**THE WARRANTIES SET FORTH HEREIN ARE IN LIEU OF ALL WARRANTIES, EXPRESS, IMPLIED AND/OR STATUTORY, INCLUDING, BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY, FITNESS AND/OR SUITABILITY FOR A PARTICULAR PURPOSE, WITH RESPECT TO ALL KARL STORZ PRODUCTS AND/OR SERVICES, REPRESENTATIVE SAMPLES, AND/OR CUSTOMERS' CUSTOMS. IN NO EVENT, UNDER ANY TYPE, NATURE OR EXTENT, BE IT IMPLIED, EXPRESS AND/OR WHETHER ARISING UNDER OR AS A RESULT OF ANY STATUTE, LAW, COMMERCIAL USAGE, CUSTOM, TRADE OR OTHERWISE, ARE HEREBY EXPRESSLY EXCLUDED AND DISCLAIMED.** Any contrary course of performance by and between the parties will not modify any representations and/or warranties set forth herein. KARL STORZ neither assumes nor authorizes any person to assume for it any other liabilities in connection with and/or related to the sale and/or use of KARL STORZ products or provision of services. To ensure proper use, handling and care of KARL STORZ products, customer should consult the product-specific literature, instruction manual and/or labeling included with the product or otherwise available. Repair, modification or alteration of KARL STORZ products performed by any person or entity other than by KARL STORZ or an authorized repair facility of KARL STORZ nullifies and otherwise voids all applicable KARL STORZ warranties. Repairs, replacement or a product of KARL STORZ product shall not extend the term of any applicable warranty. The remedies provided herein are customer's exclusive remedies under this Warranty Policy.

**9. REPAIR PROGRAM.** This section (“Repair Program”) applies to all repairs and exchanges not covered under the Warranty Policy. If such repairs or exchanges become necessary, customer must follow the RMA procedure set forth in the “Return Merchandise Authorization Process” above. All repairs and exchanges shall be subject to applicable KARL STORZ’s applicable standard repair or exchange charges. Customer will be advised of the estimated cost of the repair work or a product exchange before it is undertaken. All repairs under this Repair Program carry a 90 day warranty. Any exchange product provided under this Repair Program carries the applicable KARL STORZ new product warranty. If an exchange product is provided and the damaged product is not returned within 30 days of receipt of the applicable product exchange, Customer will be invoiced for the applicable contracted price or the full list price of the exchanged product. Subject to the availability of product, KARL STORZ may, provide customer with loaner product while repairs are being made.

**10. SOFTWARE OWNERSHIP AND LICENSING.** Subject to the applicable quotation, non-transferable license fees, as applicable, set forth in the applicable quotation or agreement, KARL STORZ grants to customer a non-exclusive, limited, non-transferable (except in connection with a transfer of a product), non-sublicensable and irrevocable (except as provided herein) license (“License”) to use software (including, but not limited to, programmed logic, computer programs and/or operating information) programmed into and/or embedded in products provided by KARL STORZ or separately provided by KARL STORZ. Such licensed software may be developed by or on behalf of (a) KARL STORZ (“KARL STORZ Software”) and/or (b) third party developers (all of whom are considered third party beneficiaries of this section) (“Third Party Software”) (“KARL STORZ Software” and “Third Party Software” are referred to collectively as “Software”). The Software is licensed only in the form in which delivered to customer and only for use in accordance with KARL STORZ’s written instructions for the Software or in the product in which the Software is embedded or to which the Software relates and may be subject to annual license fees as set forth in the applicable quotation. The Software, and all modifications, updates, enhancements and upgrades provided by KARL STORZ, will, at all times, remain the property of KARL STORZ or the applicable third party developer. Customer may not (a) duplicate, copy, reverse-engineer, create, re-create, de-compile or disassemble the Software (or the source code of the Software), (b) create derivatives of the Software, or (c) unless authorized by KARL STORZ in advance, modify or customize the Software. Any and all duplicates, copies and derivatives of the Software, and any unauthorized modifications to, or customizations of, the Software will immediately be the sole property of KARL STORZ and customer is not entitled to the licensing of Software to customer, nor the purchase, lease or other acquisition of products by customer constitutes a transfer of the Software, (b) the Software is the property of KARL STORZ or the applicable third party developer, (c) customer neither owns nor acquires any interest in any copyright, patent or other intellectual property right in or to the Software as a result of the License granted herein or the purchase, lease or other acquisition of any product, and (d) KARL STORZ, or the applicable third party developer, retains and owns all right, title, and interest in and to the Software and the ownership rights therein, at all times, regardless of the form or media in or on which the original or any copy of the Software may exist. In the event of a failure of customer or its agents, employees or representatives to comply with any terms and conditions of the License granted herein, the License will, without any further action by KARL STORZ or any other party, immediately terminate.

**11. SOFTWARE AND SECURITY SERVICES.** Solely with respect to products for which customer has purchased software licenses and security services, KARL STORZ grants to customer a non-exclusive, limited, non-transferable (except in connection with a transfer of the product), non-sublicensable and irrevocable (except as provided herein) license (“License”) to use software (including, but not limited to, programmed logic, computer programs and/or operating information) programmed into and/or embedded in products provided by KARL STORZ or separately provided by KARL STORZ. Such licensed software may be developed by or on behalf of (a) KARL STORZ (“KARL STORZ Software”) and/or (b) third party developers (all of whom are considered third party beneficiaries of this section) (“Third Party Software”) (“KARL STORZ Software” and “Third Party Software” are referred to collectively as “Software”). The Software is licensed only in the form in which delivered to customer and only for use in accordance with KARL STORZ’s written instructions for the Software or in the product in which the Software is embedded or to which the Software relates and may be subject to annual license fees as set forth in the applicable quotation. The Software, and all modifications, updates, enhancements and upgrades provided by KARL STORZ, will, at all times, remain the property of KARL STORZ or the applicable third party developer. Customer may not (a) duplicate, copy, reverse-engineer, create, re-create, de-compile or disassemble the Software (or the source code of the Software), (b) create derivatives of the Software, or (c) unless authorized by KARL STORZ in advance, modify or customize the Software. Any and all duplicates, copies and derivatives of the Software, and any and all unauthorized modifications to, or customizations of, the Software will immediately be the sole property of KARL STORZ and customer is not entitled to the licensing of Software to customer, nor the purchase, lease or other acquisition of products by customer constitutes a transfer of the Software, (b) the Software is the property of KARL STORZ or the applicable third party developer, (c) customer neither owns nor acquires any interest in any copyright, patent or other intellectual property right in or to the Software as a result of the License granted herein or the purchase, lease or other acquisition of any product, and (d) KARL STORZ, or the applicable third party developer, retains and owns all right, title, and interest in and to the Software and the ownership rights therein, at all times, regardless of the form or media in or on which the original or any copy of the Software may exist. In the event of a failure of customer or its agents, employees or representatives to comply with any terms and conditions of the License granted herein, the License will, without any further action by KARL STORZ or any other party, immediately terminate.

**12. DISPUTES.** All controversies, disputes and claims, shall be adjudicated by a court of competent jurisdiction within the County of Los Angeles, State of California or the United States District Court, Central District of California, courts shall have exclusive jurisdiction over such matters. All transactions by and between customer and KARL STORZ shall be governed by and construed in accordance with the laws of the State of California without regard to its conflict of laws principles. The invalidity or unenforceability of any of the within Terms will not affect the validity or enforceability of any other or remaining term or condition hereof.

**13. LIMITATION OF LIABILITY.** KARL STORZ is not liable for any special, incidental, consequential, punitive, exemplary or indirect damages, from any cause whatsoever in connection with or arising from the purchase, sale, lease, rental, installation, performance or use of KARL STORZ products or services, even if KARL STORZ has been advised of the possibility of such damages. SOME JURISDICTIONS DO NOT ALLOW EXCLUSIONS AND DISCLAIMERS OF CERTAIN WARRANTIES OR LIMITATIONS OF LIABILITY, SO THE LIMITATIONS AND/OR EXCLUSIONS SET FORTH IN THESE TERMS MAY NOT APPLY. IN THAT EVENT, KARL STORZ’S LIABILITY WILL BE LIMITED TO THE GREATEST EXTENT PERMITTED BY LAW IN THE SUBJECT JURISDICTION.

**14. COMPLIANCE WITH LAWS, DISCOUNT EXCEPTION AND SAFE HARBOR.** Customer shall comply with all applicable laws and regulations, including but not limited to the federal health care program anti-kickback statute, 42 U.S.C. § 1320a-7b(b) (“AKS”). Customer acknowledges its obligations to fully and accurately report the following: (a) rebates, credit, product replacements (including those related to a warranty, service, price, or otherwise) and/or other price reductions (collectively “Discounts”), if any, it receives from KARL STORZ, under all applicable laws and regulations, including but not limited to the AKS, the Discount Exception and the Discount Safe Harbor. Customer may be obligated to report and/or provide information concerning any such Discounts provided by KARL STORZ pursuant to 42 U.S.C. § 1320a-7b(b)(3)(A) (the “Discount Exception”) and/or 42 C.F.R. § 1001.952(h) (the “Discount Safe Harbor”), other federal or state laws, or agreement with third party payors. Customer should retain documentation of any Discounts and make such information available to federal or state health care programs, applicable federal and/or state agencies, and/or third party payors, upon request. KARL STORZ will provide to customer invoices related to purchases, and other reports/documentation as applicable, documenting any Discounts for such products and/or services. Customer is responsible for appropriate allocation and/or apportionment of any Discounts among products and/or services. Customer acknowledges that this agreement puts customer on notice of its obligations under the AKS, Discount Exception and Discount Safe Harbor and all other applicable laws and regulations.

Recommended Set for Difficult and Standard Intubation

Both in intraclinical but in particular in preclinical emergency medicine, difficulties in securing the airways – whether expected or unexpected – always present situations an anesthetist or emergency physician would like to avoid, but cannot always prevent. If intubation problems are foreseeable, an elective fiber optic intubation, preferably under topical anesthesia and light sedation should be regarded as the “gold standard.”

If “cannot intubate” or even “cannot ventilate – cannot intubate” situations occur unexpectedly, fast and well-planned action becomes necessary in order to manage an acute life-threatening situation for the patient. Any person wanting to perform an intubation must be equipped to answer the question: “What do I do, if the intubation is unsuccessful?” Once the situation has occurred, there is no time for long considerations. For this reason, organizations such as the American Society of Anesthesiologists (ASA) or European Resuscitation Council (ERC) developed algorithms for such situations that range from a procedure using modified laryngoscope blades, instruments such as the laryngeal tube or laryngeal mask to cricothyrotomy, in order to enable the intubator to achieve the greatest benefit of his patients. The prerequisite for successful airway management is that the user has an advance plan for proceeding in case of difficulties; that he has both theoretical knowledge and practical experience in alternative techniques, and especially that these instruments also can be made available in a sufficiently short period of time. In the OR area, this problem can be handled relatively easily, but becomes already significantly more difficult for intubation problems in emergency patients on a ward. Under preclinical conditions, these problems are almost unmanageable.

This Airway Management Set was developed to provide the entire line of recommended instruments and equipment for expectedly and unexpectedly difficult airway management. With its relatively small dimensions, low weight and a LED battery-powered light source, this set can be used quickly and flexibly. In addition to flexible fiber optics, the BONFILS intubation endoscope, the laryngeal tube as well as standard and intubation laryngeal masks, this set also provides the user with instruments for a cricothyrotomy. This means that especially in a preclinical situation, the user is able to quickly select and use an appropriate alternative after an unsuccessful laryngoscopic intubation.

Prof. Dr. Dr. med. W. LIPP, M.D., N. GOLECKI, Johannes Gutenberg University Mainz, Germany
LIPP/GOLECKI Airway Management Set

Basic Set

Recommended Set for Difficult and Standard Intubation

11300 B3 LIPP/GOLECKI Airway Management Set, for the difficult airway including:

- Intubation Fiberscope, 3.7 mm x 65 cm
- BONFILS Retromolar Intubation Endoscope, 5 x 40, autoclavable
- Battery Light Source LED for Endoscopes
- Mask Adaption “MAINZ Adaptor”, blue, package of 5
- Laryngeal Tube, size 4
- Laryngeal Tube, size 3
- Spiral Tube, size 6, for single use
- Bronchoscope Insertion Tube, size 4
- Laryngeal Mask, standard, reusable, size 1
- Laryngeal Mask, standard, reusable, size 2
- Laryngeal Mask, standard, reusable, size 4
- Intubation Laryngeal Mask, reusable, size 3
- Intubation Laryngeal Mask, reusable, size 4
- Laryngeal Mask Tube, diameter 7 mm
- Laryngeal Mask Tube, diameter 7.5 mm
- LMA Tube Stabilizer
- MAGILL Forceps, length 25 cm
- Scalpel, for single use, package of 10
- COTTLE Nasal Speculum, blade length 55 mm, length 13 cm
- DÖRGES Emergency Laryngoscope Blade, cold light, universal size
- Handle Sleeve, ISO 7376
- Battery Insert, with 2 Batteries 121306 S and Xenon Lamp 8546 XA
- Case

For further product information see pages 32, 46, 51, 60 and 78-79

Instrument Carts see chapter 5

Components/Spare Parts see chapter 7
“Difficult airways” are more prevalent in preclinical emergency medicine than in clinical anesthesiology due to several factors. In the past, attempts to optimize this situation often failed due to the limited technical resources available to emergency response physicians. Whereas it is possible to fall back on fiberoptic intubation in clinical routine, this option is not available in the preclinical setting. Furthermore, the procedure does not work well due to the time constraints associated with emergency medicine.

Video laryngoscopy first offered anesthesiologists a new and promising procedure which quickly became viable for emergency response physicians. As blood and secretions in the pharynx may obstruct the telescope, conventional and direct laryngoscopy must be available as an option despite modern technology. One of the many distinguishing features of the C-MAC® video laryngoscope from KARL STORZ is the possibility to combine indirect, video laryngoscopic visualization with direct laryngoscopy via a standard MACINTOSH blade, without the need to change the laryngoscope.

Positive experiences with the C-MAC® in clinical settings quickly led to its use in emergency medicine. Transporting an additional monitor bag and problems positioning the monitor on or near the patient in the preclinical setting led to the further development of the C-MAC® to C-MAC® PM (Pocket Monitor) which features a high-contrast display directly at the laryngoscope handle.

C-MAC® PM is a standard laryngoscope on the CHRISTOPH 22 rescue helicopter in the meantime. Whereas intubation with the MACINTOSH blades 2, 3 and 4 are almost always successful, the use of a malleable intubation catheter is a useful aid for intubation with a curved D-BLADE. In addition to the MILLER blades in sizes 0 and 1, this tool is also included in the instrument set on the CHRISTOPH 22 helicopter.

The new, robust and water-resistant intubation bag -C22- offers clearly arranged storage for the C-MAC® PM in the emergency backpack. It also provides ample space for the aforementioned blades, a malleable intubation catheter, a set of tubes and fixing material.

Dr. B. HOSSFELD,
RTH CHRISTOPH 22, Ulm,
Germany

**Special Features:**
- Recommended bag for storing the entire intubation equipment
- Recommended intubation set for routine and difficult intubation
- Recommended intubation set for preclinical intubation and mobile settings
- Suitable for direct and indirect intubation
- For video intubation and standard intubation
- Laryngoscopes can accommodate suction catheters, O₂ catheters or AINTREE catheters
- C-MAC® PM with OTI* display and rechargeable Li-ion batteries
- Daylight-readable monitor
- All video laryngoscope components are IPX8 certified and validated for manual/machine reprocessing up to 60°C as well as HLD
- “High-Power LED” standard laryngoscope available as an alternative
- MAGILL forceps, modified by BOEDEKER, for video-assisted foreign body removal
- Padded bag designed for difficult working and environmental conditions in preclinical settings
- Bag made from tear-resistant PAX material; washable inside and outside and suitable for wipe disinfection

*“Open to intubate” without additional inconvenient switches or push buttons*
Intubation Set -C22-, ULM Model

Basic Set

8400 B  Intubation Set -C22-, ULM model
         including:
         BOEDEKER-DÖRGES C-MAC® Video Laryngoscope, MAC #3
         BOEDEKER-DÖRGES C-MAC® Video Laryngoscope, MAC #4
         C-MAC® Video Laryngoscope D-BLADE
         C-MAC® Pocket Monitor Set
         Charging Unit, for C-MAC® pocket monitor
         Protective Cap
         Handle Sleeve, ISO 7376
         DÖRGES Emergency Laryngoscope Blade, cold light
         Battery Insert Set LED, with cap
         Bag for Intubation Set -C22-, ULM model
         MAGILL Forceps, modified by BOEDEKER

8402 YE  Bag for Ulm Intubation Set -C22-, made of water-resistant and sturdy
         material, washable, including two compartments with several holding facilities
         for C-MAC® video laryngoscope blades with C-MAC® pocket monitor and
         conventional laryngoscopes, for use with C-MAC® Pocket Monitor 8401 XD,
         C-MAC® video laryngoscopes and conventional laryngoscopes

For further product information see pages 23, 32, 84-85, 90
Please note: The displayed instruments are not included in Bag 8402 YE.
Components/Spare Parts see chapter 7
Emergency Tracheobronchoscopy Set

Recommended Set for Difficult and Standard Intubation

Content:
1. Laryngoscope with modified MACINTOSH blade No. 4 (suitable for pediatric use)
2. Ventilation tracheoscope with light source (handle) gauge/length 9 mm/25 cm, 7 mm/20 cm, 6 mm/30 cm, 5 mm/20 cm with variable add-on (viewing window, rubber cuff for rigid telescope, suction window)
3. MAGILL forceps, large and small
4. Tongue seizing forceps
5. Grasping forceps for peanuts and soft foreign objects, grasping forceps with pike mouth for foreign objects
6. 3 Suction tubes, usable length 35 cm and 50 cm, misc. thickness

Indications:
1. Planned use
   a. Removal of foreign bodies (FB) in hypopharynx, laryngeal and trachea
   b. Expected difficult intubation (see algorithm) in the presence of tumors in the area of the pharynx
   c. Expected difficult intubation in the presence of tumors of the larynx and trachea
2. Unexpected Use
   a. Unexpected difficult intubation in the presence of tumors in the laryngeal, hypopharynx or tongue area
   b. Unexpected difficult intubation in the presence of swelling in the area of the larynx and upper trachea
   c. Unexpected difficult intubation in the presence of abscesses in the area of the floor of the mouth
   d. Unexpected difficult intubation in the presence of stenoses in the area of the laryngeal and upper trachea

Explanation:
Item 1a: In this situation, the planned use for removal of foreign bodies corresponds to the standardized procedure. The FB can be extracted with different grasping forceps. Depending on its location, the FB is visualized employing direct laryngoscopy using a MACINTOSH blade. If the FB is located below the glottis plane, the emergency tracheoscope is used. The latter also can be used for ventilation, if needed. The advantage of the modified MACINTOSH blade is its smaller width in the front part of the blade and the overall lower height and reduced curvature. This makes the blade usable for all ages (minimum weight: 22 lbs (10 kg)).

Items 1 b and c: On the basis of a correct preoperative diagnosis (indirect laryngoscopy or direct laryngoscopy with a fiberscope) and the possibility of mask ventilation, the intubation is performed with the emergency ventilation bronchoscope/tracheoscope after anesthesia has been initiated. This always requires that the mouth can be opened and that the cervical spine is normally movable. Passage through mouth/pharynx must be possible; although the space required for the emergency tracheoscope is rather small. Extremely protruding upper incisors may, however, impede or even prevent its use. If no mask ventilation appears possible, a tracheostoma should be placed under local anesthesia (planned procedure!).

Item 2: In the case of an unexpected difficult intubation, the emergency tracheoscope can be used very quickly, since no complex technical equipment is necessary. In contrast to the fiberscope, the rigidity enables both axial as well as, naturally, a significant tangential force to be exerted. At the same time, this is associated with a potential for injury that should not be underestimated.

Tumors can be pushed aside; swelling due to abscesses, stenoses and swelling in the laryngeal area and under the glottis also can be passed with measured force and under visualization. In the process, the different gauges and lengths of the shaft must be taken into account. If there is significant mucus, suction can be applied through the instrument. In case of hemorrhages, the limit of the use is reached when anatomical structures can no longer be recognized safely. It should be noted that with a very narrow viewing angle the field of view is significantly smaller than with a fiberscope or rigid HOPKINS® wide angle telescope.

Contraindications/Problems:
- Clamped jaw
- Fixed or injured cervical spine
- There is no safe aspiration protection because no blockage is possible.
Recommended Set for Difficult and Standard Intubation

In general, the simplified algorithm for an unexpected difficult intubation is as follows (modified according to GEORGI et al, Katharinenhospital Stuttgart, Germany):

### Unexpected difficult airway

**Elective Measures**
- Send for help
- Spec. laryngoscope blade
- Mandrels/guides
- BONFILS Retromolar Intubation Endoscope
- Emergency ventilation tracheoscope
- Fiberoptical intubation using aids

**Emergency Measures**
- Stop time, send for help
- BONFILS Retromolar Intubation Endoscope
- Emergency ventilation tracheoscope
- Larynx mask, COMBITUBE®
- Coniotomy

### Successful
- Verify
- Document

### Unsuccessful
- Larynx mask
- Local/regional anesthesia
- Tracheotomy
- Delay surgery

**Explanation:**

1. This algorithm only relates to the problem of the unexpected, difficult intubation. The plannable situation has been described above.
2a. If mask ventilation is adequate:
   I Use of special laryngoscope blades (potentially permit intubation without direct visualization)
   II BONFILS Retromolar Intubation Endoscope (intubation under direct visualization, directly achieves tube placement)
   III Emergency tracheoscope, when glottis ostium cannot be clearly visualized (tumor or swelling), and head can be hyperextended. Ventilation possible via emergency tracheoscope. Then, either establishment of tracheostoma or re-intubation using a tube exchange catheter.¹
   IV Fiberoptical intubation via MAINZ adaptor or endoscopy mask (intubation under direct visualization, achieves direct tube placement, but material- and personnel-intensive)
   V Larynx mask or intubation larynx mask or COMBITUBE® (if problem is not on glottis plane; achieves time savings, if it enables ventilation.)
   VI Operative airway under mask ventilation

2b. If mask ventilation is not adequate, the possible alternatives must be weighed very quickly.
   I Larynx mask or intubation larynx mask or COMBITUBE® (if problem is not on glottis plane; achieves time savings, if it enables ventilation.)
   II BONFILS Retromolar Intubation Endoscope (if laryngeal structure can be verified with direct laryngoscopy. Use possible very quickly, but only a conceivable alternative for experienced personnel).
   III Emergency tracheoscope, when cause is in laryngeal area (tumor or swelling), and head can be hyperextended. Ventilation possible via emergency tracheoscope. Then, either establishment of tracheostoma or re-intubation using a tube exchange catheter ¹)
   IV Emergency coniotomy

¹) Please note:
   This refers to unexpected difficult intubations only. An impossible passage of the mouth cavity therefore is of no concern, since it would have been foreseeable.

A. HENN-BEILHARZ, M. D.,
Katharinenhospital, Stuttgart,
Germany
10330 F

**Emergency Tracheoscope Set**

including:
- **Emergency Bronchoscope**, size 6, length 30 cm
- **Emergency Tracheoscope**, size 9, length 25 cm
- **Emergency Tracheoscope**, size 7, length 20 cm
- **Emergency Tracheoscope**, size 5, length 20 cm
- FLUVOG Adaptor
- Adaptor for Ventilation

DÖRGES **Emergency Laryngoscope Blade**, cold light, universal size
2x **Handle Sleeve**, ISO 7376
2x **Battery Insert**, with 2 Batteries 121306 S and Xenon Lamp 8546 XA
**Xenon Lamp**, package of 6
**Forceps**, for peanuts and soft foreign bodies
**Forceps**, alligator, for hard foreign bodies
**MAGILL Forceps**, length 20 cm
**MAGILL Forceps**, length 25 cm
**YOUNG Tongue Seizing Forceps**
**Suction Tube**, diameter 3 mm, length 35 cm
**Suction Tube**, diameter 4 mm, length 35 cm
**Suction Tube**, diameter 5.5 mm, length 35 cm
**Case**

The DÖRGES blade design allows it to replace the MACINTOSH laryngoscope blades, size 2 – 4, which are traditionally used. The working length of the blade is 120 mm, putting it exactly between the length of the MACINTOSH 3 and 4 to enable intubation under large anatomical conditions.

The blade tip has a width of 11 mm, corresponding to the MACINTOSH laryngoscope blade, size 2, allowing intubation of emergency patients from one year of age to adult. The tapered shape of the blade is especially helpful. Along with the required length, the blade also has the correct width for the respective age group.

An inadvertent introduction of the blade too deeply in the case of children is also prevented by 2 approximating, weight-calibrated markings on the front and rear of the blade. The blade is only slightly curved, especially in the front, making intubation of small children easier.

The tapering of the blade from 0° at the tip to 20° at the rear permits a better view when introducing the blade horizontally. Together with the very low height of 16 mm, this also facilitates rapid intubation in emergency situations and when the mouth opening is limited, as well as its low profile enables fast intubation in emergency situations and where the mouth opening is restricted, especially when performed by less practiced persons.

By limiting the selection to just two intubation blades, uncertainty about choosing the correct blade size under urgent treatment conditions is greatly diminished.

Special Features:
- The special design of the blade makes it suitable for intubating small children, adolescents and adults.
- The thin front section makes this blade very suitable for ENT, e.g., constricted anatomical conditions due to hypertrophic tonsils.
- The overall low height of this blade permits easy intubation even when patients cannot open their mouth wide, e.g. in case of lockjaw or poor relaxation.
- Forward placement of the light outlet provides good illumination.
- Less space is required at the worksite with just one blade size (helpful for rescue services).
- Uniform blade sizes enable easier and standardized training, e.g. for emergency medical personnel.

Handles with LED Light Source
for Cold Light Laryngoscope Blades

Special Features:
- Rechargeable lithium-ion batteries
- Extremely bright LED of more than 50 lm/>100,000 LUX (100 klx)
- Absolute white light due to LED technology (5500 K) 100,000 LUX (100 klx)
- Small handle with photo battery
- Special lens system allows optimal light adjustment at the blade connector
- LED provides a lifetime of more than 50,000 hours
- Burning time up to 240 min at 100% brightness
- Charging via inductive technology
- ISO 7376 compatible

8546 Handle Sleeve, ISO 7376, autoclavable, length 12 cm, for use with Battery Inserts 8546 LD1, 8549 LDX and cold light laryngoscopes
8548 Handle Sleeve, ISO 7376, length 6 cm, autoclavable, for use with Battery Insert Set 8548 LDX
8546 LD1 Battery Insert, rechargeable, length 12 cm, for Handle Sleeve 8546, with high-power LED, 56 lm/>100 klx, lithium-ion battery insert, burning time at 100% brightness 240 min, charging via Inductive Charging Unit 8546 LE (see page 29)
8548 LDX1 Battery Insert Set, length 6 cm, for Handle Sleeve 8548, with high-power LED, >56 lm/>100 klx, burning time at 100% brightness >120 min including:
- Battery Insert, high-power LED
- Battery Insert Set LED, length 12 cm, for Handle Sleeve 8546 and cold light laryngoscopes, with high-power LED, >56 lm/>100 klx, burning time at 100% brightness >120 min including:
  - Battery Insert, high-power LED
  - 2x Alkaline “AA” Battery, LR 06, 1.5 V
  - Cap

Components/Spare Parts see chapter 7
Handles with Xenon Light Source
for Cold Light Laryngoscope Blades

8546

**Handle Sleeve**, ISO 7376, autoclavable, length 12 cm, for use with Battery Inserts 8546 A, 8546 LD, 8549 LD and cold light laryngoscopes

8546 A

**Battery Insert**, length 12 cm, with 2 Batteries 121306 S and Xenon Lamp 8546 XA

121306 S

**Batteries**, Alkaline “C”, LR 14, for Battery Inserts 8546 A, package of 2

8546 XC

**Xenon Lamp**, 2.5 V, for Battery Inserts 8546 A, 8547 A and 8547 B, package of 6

Especially suitable for use with blades sizes 0 and 1

8547

**Handle Sleeve**, ISO 7376, length 12 cm, autoclavable, for use with Battery Inserts 8547 A and 8547 B

8547 A

**Battery Insert**, length 12 cm, including 2 Batteries 121306 KS and Xenon Lamp 8546 XA

121306 KS

**Batteries**, Alkaline “AA”, LR 06, 2 Batteries 121306 K, for Battery Inserts 8547 A and Battery Insert Set High-Power LED 8549 LDX

8547 B

**Rechargeable Battery Insert**, length 12 cm, for Handle Sleeve 8547, with Xenon Lamp 8546 XA, charging via Inductive Charging Unit 8546 LE (see page 31)

8546 XC

**Xenon Lamp**, 2.5 V, for Battery Inserts 8546 A, 8547 A and 8547 B, package of 6
Inductive Battery Charger
for Rechargeable Laryngoscope Handles

Special Features:
● No open contacts
● No corrosion and contact problems
● No voltage peaks
● Batteries can be charged with or without handle sleeve, sterile packaging
● Compatible with previous models

8546 LE
Inductive Charging Unit, for two battery inserts (8546 LD1, 8547 B), with fully integrated mains adaptor and power adaptor for EU, UK, USA and Australia, power supply 110 – 240 VAC, 50/60 Hz, suitable for low level disinfection

8546 R
Reduction Sleeve, for Battery Insert 8547 B

11301 DH
Holder, for Charging Units 11301 DG, 8546 LE and 8401 XDL
**Instruments**

for Intubation and Inspection

- **MAGILL Forceps**, for children, modified by BOEDEKER, length 20 cm, suitable for endoscopic foreign body removal, for use with video and standard laryngoscopes size 1 and 2

- **MAGILL Forceps**, modified by BOEDEKER, length 25 cm, suitable for endoscopic foreign body removal, for use with video and standard laryngoscopes size 2 – 4

- **MAGILL Forceps**, for the introduction of endotracheal tubes, for children, length 20 cm

- **Same**, for adults, length 25 cm

- **ROCHESTER-PEAN Artery Forceps**, straight, length 14 cm

Airway Management

Eyepiece

V-MAC®

C-MAC®
See the Difference
Successful airway intubation and management can quite literally make the difference
between life and death. Video-assisted intubation gives the entire team a clear view of all
important situations. KARL STORZ offers a whole range of tools that can minimize
complications of managing difficult airways and at the same time provide optimal
visualization.

Anesthesia/OR
Pre-operative, operative and post-operative procedures are performed in this area – the
classical area for endotracheal intubation. Hence this area is predestined for the entire
Airway Management system. A distinction is made between expected and unexpected
difficult airways and solution approaches are defined accordingly in an algorithm.
KARL STORZ offers a comprehensive product portfolio for these solution approaches.

Intensive Care Unit
This is the area of the hospital with the most patients on respirators. However, endo-
tracheal intubation is seldom performed as most patients arrive already intubated.
Endotracheal intubation or extubation, and possibly reintubation, pose a major challenge
for the team. The patient is not in a suitable state for intubation and complications often
arise. The patient may require an emergency tracheotomy. The product line from
KARL STORZ offers a comprehensive range of solutions to meet these needs.

Emergency Room
As practically all emergency cases enter the clinic here, unexpected difficult intubations
are likely in this area. The team on call may have little experience with emergency
intubation. The C-MAC® video laryngoscope system can provide rapid assistance in such
cases.

Rescue Services
Endotracheal intubation is seldom used in the field. An estimated 150 – 200 intubations a
year are performed on German rescue helicopters; even fewer intubations are carried out
by ground-based rescue services. However, out-of-hospital intubations constitute up to
50% of unexpected difficult airways. This is more often due to adverse conditions than to
anatomic contraints of the patient. The C-MAC® video laryngoscope system offers
valuable assistance in these circumstances. Its weatherproof, robust design is geared
towards the preclinical setting.

Education and Training
Endotracheal intubation with a laryngoscope remains the gold standard in airway
management. This is an essential skill for all anesthesiologists, intensive care/emergency
physicians and other emergency medical personnel. Only modern video systems and
original laryngoscopes guarantee success in learning. The C-MAC® video laryngoscope
offers a professional system for this purpose.
Airway Management

Versatility
Airway management is not confined to a single hospital area. In ORs, emergency rooms, intensive care units through to preclinical emergency settings, medical practitioners are confronted with the challenges of a difficult airway. KARL STORZ offers mobile and optimum solutions for managing difficult airway situations wherever and whenever they occur.

All a Matter of Organization
Our videocart – ranging from the simplest IV stand through to the airway management cart – combines ergonomics with functionality. It is, therefore, customized to meet your specific requirements. Our airway trolley provides the optimal solution for your equipment for any algorithm regardless of its definition.

Optimal Visualization
Video-assisted intubation using a laryngoscope offers tremendous advantages over conventional laryngoscopy. Indirect laryngoscopy widens the angle of view from approx. 10° to 80°. This factor alone enables most difficult intubation cases to be downgraded to standard intubation. The major advantage of the C-MAC® video laryngoscope is the fact that it allows optimal use of both direct and indirect laryngoscopy for teaching and training purposes or under critical lighting conditions.

For the Greatest Challenges
Spinal injuries, trauma patients, maxillofacial injuries – you can count on KARL STORZ to help you master the most difficult airway situations. We are the only company to offer such a comprehensive range of endoscopic solutions for difficult airway management.

Solutions to Meet your Needs
From the MACINTOSH laryngoscope to the MILLER laryngoscope through to the reclination laryngoscope or the DÖRGES emergency laryngoscope, KARL STORZ offers you a wide range of laryngoscopes. The main feature of these laryngoscopes, however, is the LED handle which offers unique benefits. All our laryngoscopes are, of course, compatible with DIN ISO 7376 standards.

The Clever Alternative for Experts
More durable than a flexible intubation fiberscope, the BONFILS intubation fiberscope offers a proven alternative for managing difficult airways. Portable, convenient to learn, and tube placement under full visualization are just some of the many benefits this fiberscope has to offer.
Tradition with a Future
From Video Laryngoscope to Video Laryngoscope System

2000

1st Generation:
KARL STORZ developed, in conjunction with Prof. ILIAS (Vienna, Austria), the first video laryngoscope for routine use in anesthesiology. This mobile instrument was equipped with the state-of-art TELE PACK monitor technology available at the time.

2001

2nd Generation:
The second model was developed in conjunction with Prof. BERCI/Dr. KAPLAN (Los Angeles, USA) and was equipped with MVM technology (Micro Video Module). This resulted in a smaller camera and, consequently, improved ease of use.

2003

3rd Generation:
V-MAC® – this innovative development employed DCI® technology (Direct Coupled Interface) and enabled several instruments to be connected to a DCI® camera system via a one-chip camera head.

2008

4th Generation:
The latest generation of video laryngoscopes are equipped with a CMOS chip, LED and Li-Ion batteries. This makes the video laryngoscope more mobile and portable and allows more flexible use.

2012

C-MAC® as System
FIVE (flexible intubation video endoscope) can be directly connected to the C-MAC® monitor. This marks the beginning of a complete system for airway management.
From Larygoscopy to the C-MAC® System
The History of Endotracheal Intubation

500 B.C.
Hippocrates – 1st references to tracheotomy

1543
Andreas Vesalius performs the 1st endotracheal intubation on an animal and recognizes its use for humans.

1869
Friedrich Trendelenburg – performs the 1st human tracheotomy for the purpose of administering general anesthesia.

1878
John Knox McEwan performs the 1st orotracheal intubation.

1895
Alfred Kirstein performs the 1st laryngoscopy.

Manuel Garcia is generally regarded as a pioneer in laryngoscopy when he viewed the vocal cords with the use of a dentist’s mirror.

Macintosh/Magill – the exchangeable blade is named after MACINTOSH; the curve of the endotracheal tube and the forceps used to position the tube after MAGILL.

The BONFILS retromolar endoscope from KARL STORZ represents the gold standard in flexible intubation fiberscopes and also offers a proven alternative for managing difficult airways.

Prof. Peter Bumm – Head of ENT at Augsburg Central Hospital (Zentralklinikum) in Germany performs the 1st video laryngoscopy using a rigid endoscope from KARL STORZ.

KARL STORZ develops the 1st video laryngoscope.
1941
Robert Arden Miller invents the MILLER laryngoscope blade.

1943
Sir Robert Reynolds Macintosh invents the MACINTOSH laryngoscope blade.

1945
Karl Storz founds his company in Tuttlingen (Germany) at the age of 34.

1969
1st endoscopic camera from KARL STORZ (16 mm film).

Prof. Berci/Dr. Kaplan develops, in conjunction with KARL STORZ, the 2nd generation of video laryngoscopes with MVM technology.

V-MAC® – the 3rd generation of video laryngoscopes with DCI® technology from KARL STORZ.

C-MAC® – the 4th generation of video laryngoscopes, now equipped with CMOS technology from KARL STORZ.

MILLER for C-MAC® – for pediatrics and neonatology. C-CAM™ for C-MAC® – a complete system unit for complete airway management.

D-BLADE for C-MAC® – the revolutionary blade for the difficult airway.

FIVE (Flexible Intubation Video Endoscope) for C-MAC®.

Meet the Experts
Dr. M. KAPLAN, Prof. Dr. D. WARD, Prof. Dr. G. BERCI

Ever since the introduction of the laryngoscope to clinical practice in anesthesiology, attempts have been made to optimize the shape of the laryngoscope blade. These innovations aim to achieve better visualization of the laryngeal structure and to improve the success rate of endotracheal intubation. Despite these modifications, tracheal intubation is not always successful, even in the case of patients having anatomical conditions where intubation is thought unlikely to be difficult.

According to our estimates, endotracheal intubation is performed on approx. 10 million patients in the US each year, 80% of which undergo direct laryngoscopy with transoral positioning of the endotracheal tube (ETT) in the trachea. An estimated 3% or 240,000 cases annually in the US encounter unexpected difficult intubation, a decisive factor being the poor visualization of the laryngeal structure.

The shape of the V-MAC® video laryngoscope optimizes visualization as it provides the user with an enlarged video image of the airway. In conventional laryngoscopy, the anesthesiologist views the airway through a “keyhole” which becomes even narrower when attempts are made to advance the endotracheal tube.

The V-MAC® video laryngoscope consists of a laryngoscope handle with an inbuilt standard MACINTOSH Blade, sizes 2, 3 and 4, the D-BLADE as well as a DÖRGES blade and MILLER sizes 0 and 1. The video laryngoscope is thus modified so that a video image of the airway structure is projected onto a video monitor, e.g., TELE PACK X. A DCI® camera (Direct Coupled Interface) can be simply and quickly incorporated into the modified handle. In our experience, learning to handle the instrument is very easy as most anesthesiologists are already familiar with the MACINTOSH blade.

Video imaging has several distinct advantages for direct laryngoscopy. The system generates very clear video images which can be enlarged on the video monitor for better visual control. Should endotracheal larynx manipulation (ELM) be necessary to improve the view of the laryngeal structure, the anesthesiologist and the assistant are able to coordinate their movements because they can both observe the monitor at the same time. As the video images are projected from the distal end of the laryngoscope blade, this enables a view of the laryngeal structure when the endotracheal tube (ETT) is advanced from the oropharynx to the trachea.
We also found the V-MAC® video laryngoscope to be useful in thoracic cases where a double lumen tube (DLT) is first inserted under full visual control. Following a rapid changeover from the V-MAC® video laryngoscope to the flexible intubation fiberscope, the position of the double lumen tube (DLT) is checked and, after the patient is placed in the lateral position, is checked once more.

In the case of difficult intubation, CORMACK & LEHANE Grade 3 patients can be downgraded to C & L 2 before intubation.

Situations arise when a less experienced intubator has to perform Crash-/Rapid Sequence Intubation. Emergency rooms and intensive care units, which are often located away from the OR tracts for logistical reasons, serve as a good example. Any improved (laryngoscopic) visualization technique which can be applied in a life-threatening situation is invaluable to the user and patient.

The V-MAC® video laryngoscope is an excellent instruction tool for training anesthesiologists and other practitioners who need to learn the principles of intubation. The V-MAC® video laryngoscope has many diverse applications. We believe it will fill an important niche in teaching aids. Due to its improved visual control, the number of unsuccessful intubations and, hence the incidence of tissue trauma relating to intubation, will be decreased.

Dr. M. KAPLAN, Los Angeles, USA
Prof. Dr. D. WARD, Rochester, USA
Prof. Dr. G. BERCI, Los Angeles, USA
Meet the Experts

Prof. Dr. V. DÖRGES, M.D.

Benefits of Video Laryngoscopy

Intubation via direct laryngoscopy provides the user with an angle of view of approx. 10° – 15°. The special camera technology of the video laryngoscope directs the observer’s eye to the blade tip, providing an angle of view of approx. 60° – 80°. This principle of video laryngoscopy offers the user a more detailed laryngeal view which greatly increases patient safety. Improved visualization of the video laryngoscope means that the instrument exerts considerably less force on the patient’s jaw. In conjunction with the special teeth protector on KARL STORZ video laryngoscopes, this greatly reduces the risk of dental damage resulting from intubation.

Not only does the video laryngoscope from KARL STORZ provide a decisive advantage for daily use and difficult airway management, it is also a very effective teaching tool for novices. The trainee can observe the entire procedure for securing the airway on the monitor and not over the shoulder of the instructor – with little success – as is the case in direct laryngoscopy or intubation. It also enables the instructor to supervise the trainee at each step and, if necessary, offer more appropriate help.

The acquisition of still images and video sequences for laryngoscopy and intubation has been further simplified and can be controlled with buttons on the laryngoscope handle and on the monitor. This data is ideally suited for training and documentation purposes, especially in the case of difficult intubation.

Based on 65 years of experience in endoscopy and 15 years of experience in the field of video laryngoscopy, the new C-MAC® video laryngoscope from KARL STORZ combines various technical disciplines.

Direct laryngoscopy

- standard angle of view approx. 15°

Video laryngoscopy

- enlarged view approx. 60°
Meet the Experts
Prof. Dr. V. DÖRGES, M.D.

Great attention has been paid to actual market requirements such as hygiene, mobility, universal use and robustness in the process.

As a result, the system is suitable for routine clinical procedures in the OR, intensive care medicine and emergency hospitalization, as well as preclinical procedures using ground or air-based life-saving equipment.

The stainless steel laryngoscope blade corresponds to the European closed version and, therefore, meets all hygienic standards. Furthermore, the blade's optimized (minimized) height and flattened proximal end ensures minimal discomfort for the patient, even when the oral aperture is greatly restricted. The original MACINTOSH blade shape is available in sizes 2, 3 and 4. A special curved blade design, the D-BLADE, is available for difficult airways in adults. MILLER 0 and 1 blade shapes are available for use in neonatology and pediatrics.

The CMOS chip provides optimal visualization via the approx. 60° angle of view and high-power LED illumination. In addition, fogging of the telescope due to the heating-up of the LED is practically eliminated. The blade tip appears at the top of the image border. The C-MAC® system is ready for use within seconds. Rechargeable lithium-ion batteries guarantee use for two hours – equivalent to approx. 200 intubations.

The monitor is made of shock-resistant plastic and is also splash-proof (IP54). A resolution of 800 x 480 pixels makes the screen very fast. The laryngoscope enables detail screens as well as video sequences to be captured and stored on a SD card in a JPEG or MPEG4 format. To ensure rapid documentation, only SDHC cards class 10 should be used. Consequently, menu navigation is straightforward.

The plug is mounted on the rear to avoid impact – the VESA 75 norm enables easy connection of other accessories here.

The C-MAC® from KARL STORZ also stands out as its total weight is less than 1.5 kg (including a laryngoscope). The C-MAC® system can be stored in a practical, water-repellent protective bag and is, therefore, ideal for preclinical use.
KARL STORZ provides the instruments you need to meet the special challenges of patients who cannot be intubated with conventional methods. Nasopharyngeal awake intubation is regarded as the gold standard of difficult airway management. We offer solutions for any challenge!

Special Features:
- Sheath stiffness adapted to anesthesiological requirements
- Suitable for both fiber optic intubation and bronchoscopy
- Patented sheath surface special treatment requires only minimal lubrication and provides optimal tube insertion
- Developed for use in the OR, ICU, ER
- Even safer tube introduction due to video-assisted control on the monitor
- Tube position of ETT, LMA, DLT can be verified
- Video-assisted monitoring for percutaneous tracheostomy
- Adaptable for foreign body removal or bronchial lavage

Our versatile intubation fiberscopes can be used in all clinical settings whether in intensive care units or emergency rooms as well as for patients with anticipated difficult airways during induction. The various sheath diameters enable you to select the ideal instrument for your patient and allow a swift reaction thanks to the compact, flexible LED light sources.

- Various outer diameters: 2.8; 3.7; 5.2 mm
- Diameter of working channel ranging from 1.2 to 2.3 mm
- Extremely bright, white light due to the LED light source with rechargeable Li-Ion batteries
- Intubation fiberscope can be directly connected to the C-MAC® monitor with the mobile camera head C-CAM™
- Suitable and validated for the following low-temperature reprocessing methods up to a max. of 60 °C: manual/mechanical cleaning and disinfection, sterilization with Steris® AMSCO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards
2.8 x 65 Intubation Fiberscope with optimized imaging

Intubation Fiberscope 11301 AA1 is ideal for use in neonatology due to its small outer diameter of 2.8 mm. This fiberscope is the only one of its size that has a working channel with 1.2 mm.

Intubation Fiberscope 11301 AA1 features a connector for suction valves for single or multiple use.

The special sheath surface combined with increased stiffness improves the gliding properties of the ETT over standard intubation fiberscopes.

The use of a mobile LED light source enables independent work under optimal lighting conditions.

Benefits:
- Effective suction possible via the 1.2 mm working channel
- Suitable for use with endotracheal tubes as of 3.5 mm
- Increased stiffness and smoother passage of the ETT
- Ready for immediate use and easy to clean and reprocess
- Optimized for use with mobile light sources
- Intubation fiberscope can be connected to the C-MAC® monitor via the mobile C-CAM™ camera head
- Practical tube fixation via special adaptor

2.8 x 50 Intubation Fiberscope without suction port

Intubation Fiberscope 11301 AB1 is ideal for use in neonatology due to its small outer diameter of 2.8 mm. This fiberscope is the only one of its size that has a working channel of 1.2 mm.

Intubation Fiberscope 11301 AA1 features a connector for suction valves for single or multiple use.

The special sheath surface combined with increased stiffness improves the gliding properties of the ETT over standard intubation fiberscopes.

The use of a mobile LED light source enables independent work under optimal lighting conditions.

Benefits:

Intubation Fiberscope 2.8 x 50, without suction valve
Deflection up/down: 140°/140°
Direction of view: 0°
Angle of view: 90°
Working length: 50 cm
Working channel inner diameter: 1.2 mm
Distal tip outer diameter: 2.8 mm

Optional Accessories for Intubation Fiberscopes see page 49 and pages 77 ff.
3.7 x 65 Intubation Fiberscope with optimized imaging

The 3.7 x 65 intubation fiberscope is a universal working instrument as it provides gold standard intubation for both adult and pediatric patients. Due to its small diameter, it is an excellent tool for the placement of double lumen tubes. Using a mobile LED light source and C-CAM™, the intubation fiberscope can be directly connected to the C-MAC® monitor for a monitor-assisted intubation solution that is both mobile and flexible – also suitable for electronic documentation.

Benefits:
- Effective suction possible via 1.5 mm working channel
- Suitable for use with endotracheal tubes as of 4 mm
- Increased stiffness and smoother passage of the ETT
- Practical tube fixation via special adaptor
- Ready for immediate use and easy to clean and reprocess
- Optimized for use with mobile light sources
- Intubation fiberscope can be connected to the C-MAC® monitor via the mobile C-CAM™ camera head

**5.2 x 65 Intubation Fiberscope with optimized imaging**

The 5.2 x 65 intubation fiberscope creates an ideal balance between image size, working channel size and fiber optics. Effective suction is possible via the 2.3 mm working channel. The fiberscope is also suitable for removing foreign bodies or for bronchial lavage in the intensive care unit. Using a mobile LED light source and C-CAM™, the intubation fiberscope can be directly connected to the C-MAC® monitor for a monitor-assisted intubation solution that is both mobile and flexible – also for electronic documentation.

**Benefits:**
- Effective suction possible via the large 2.3 mm working channel
- Suitable for use with endotracheal tubes as of 5.5 mm
- Increased stiffness and smoother passage of the endotracheal tube
- Practical tube fixation via special adaptor
- Ready for immediate use and easy to clean and reprocess
- Optimized for use with mobile light sources
- Intubation fiberscope can be connected to the C-MAC® monitor via the mobile C-CAM™ camera head

### Accessories included in delivery:

- **Case**
- **Pressure Compensation Cap**, for ventilation during gas sterilization
- **Leakage Tester**, with bulb and manometer
- **LIPP Tube Holder**, for intubation fiberscopes
- **Plug**, for LUER-Lock connector for cleaning, black, autoclavable, package of 10
- **Irrigation Adaptor**, for machine cleaning, reusable, for fiberscopes
- **Suction Valve**, for single use, package of 20
- **Cleaning Brush**, tapered, outer diameter 3 – 5 mm, for working channel 1.8 – 2.8 mm, length 116 cm
- **Long Cleaning Brush**, for working channel 1.2 – 1.7 mm, length 110 cm
Please note that the accuracy of the ETT diameter may vary depending on the manufacturer's quality.

For product information on flexible bronchoscopes see catalogs THORAX and ENT Instrument Carts see chapter 5
The expert instrument for multiple applications in airway management combines technical sophistication with utmost reliability.

Unexpected difficult airways are always a challenge in airway management. With the BONFILS optical stylet and its versatile intubation techniques, this situation can be brought back to a controlled status. The endotracheal tube is guided into the trachea under direct vision and the possibility of simultaneous application of oxygen provides more safety. Moreover, KARL STORZ offers a solution to meet the most stringent hygiene requirements – the autoclavable SILVER LINE.
**BONFILS Retromolar Optical Stylets**

**Eyepiece Versions**

Special Features:

- SILVER LINE – autoclavable
- Particularly suitable for the unexpected difficult airway
- Use in the case of minimal mouth opening (> 1 cm) possible
- Introduction of the tube under visualization: What you see is what you get!
- Continuous O₂ flow via tube adaptor between tube and instrument
- One-person intubation possible

- Connect and intubate – thanks to the mobile LED “Power of Light” light source
- Quick and easy cleaning
- Suitable and validated for the following low-temperature reprocessing methods up to bis max. 60 °C: manual/machine cleaning and disinfection, sterilization with Steris® AMSCO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards
- Recommended for video-assisted intubation with C-CAM™ to C-MAC® monitor

**Components/Spare Parts** see chapter 7

**LED Battery Light Source for Endoscopes** (11301 D1/D3), optional, see page 60

LED Battery Light Source for Endoscopes (11301 D1/D3), optional, see page 60
C-CAM™ transforms the C-MAC® video laryngoscope into an all-round system unit for complete airway management. The C-MAC® monitor is at the core of all imaging systems. C-CAM™ is a high-grade CMOS camera with VGA resolution which can be connected to all KARL STORZ endoscopes with eyepieces. Illumination is ensured through the Power-LED battery light sources. Consequently, this is the first battery-powered video system to guarantee high-quality documentation. KARL STORZ has once again proven that high quality and mobility are not mutually exclusive.
Special Features:
- Resistant ABS plastic housing
- Splash-proof according to IP54
- 7" TFT wide view angle display with resolution of 800 x 480 pixels
- Ready for use within seconds
- Documentation of still images (JPEG) and videos (MPEG4) on SD memory card
- VESA 75 norm for connecting and attaching racks
- Soft keys enable use within seconds

- Cinch video output for connecting external monitor
- System open for further components
- Battery operating time for up to 2 hours
- World power supply 100 – 240 VAC, 50/60 Hz
- Operation with line voltage and rechargeable lithium-ion batteries
- Additional standards: RTCA/DO-160F, EMI Test Report (German air rescue service DRF Luftrettung)

8402 ZX-1

8402 ZX-1 Monitor for CMOS Endoscopes, screen size 7”, documentation can be stored directly on SD card, rechargeable Li-Ion batteries, power adaptor for EU, UK, USA and Australia, power supply 110 – 240 VAC, 50/60 Hz, additional standards: RTCA/DO-160F, EMI Test Report (German air rescue service DRF Luftrettung), suitable for wipe disinfection

20 2901 32
C-CAM™ Camera Head, 8-pin, one-chip CMOS camera head, resolution 640 x 480, focal length f = 20 mm, compatible with C-HUB™ 20 2901 01 and C-MAC® 8402 ZX-1

20 2901 31
C-CAM™ Camera Head, 6-pin, one-chip CMOS camera head, resolution 640 x 480, focal length f = 20 mm, compatible with C-MAC® 8401 ZX
The system allows a changeover of instruments in seconds, a decisive advantage in critical situations. But also in an emergency, where there is no time for video-assisted intubation, we offer the right adaptor solutions. New perspectives for the teaching and further training of medical personnel are also provided. The system design differs considerably from other providers where you can only find so-called “stand-alone” solutions without any compatibility.
TELE PACK X is a compact, portable and flexible system that has been developed for use in a large number of fields. It can be used in doctors’ practices as well as in emergency rooms. The TELE PACK X monitor offers maximum resolution and very high color fidelity for a first-class video playback. To enable swift and easy work, TELE PACK X combines all that is needed: monitor, camera and light source. Consideration has also been given to documentation: integrated data management enables comprehensive recording of examinations or surgical interventions. Multiple USB ports and an SD card slot are available to store the data.

Crystal clear display
- 15” LCD display
- Image rotation
- 24-bit color intensity for natural color rendition
- DVI video output for connecting HD monitors

Flexible storage possibilities
- SD card slot for high storage capacity
- USB ports for external hard drives, USB sticks and post-script printers
- Picture gallery for records
- Playback of saved videos
- Print-ready patient report documentation

Natural illumination
- HiLux 50 Watt high-performance light source
- Natural colour rendition close to daylight with a color temperature of 6000 K
- Up to 1000 hours lamp operating time

Easy control combined with utmost safety
- Membrane keyboard for wipe-down disinfection
- Hot keys for rapid and direct adjustment
- Arrow keys for intuitive control
- Connection socket for pedal control

Additional information
- Sturdy, portable housing
- Ergonomically designed handle for convenient transport
- World power supply unit: 100 – 240 VAC, 50/60 Hz
- Dimensions (w x h x d): 450 x 350 x 150 mm
- Weight: 7 kg
TELE PACK X

Sample Configuration

20 045001-EN

20 0450 01-EN TELE PACK X, endoscopic video unit for use with TELECAM one-chip camera heads and video endoscopes, incl. 50 W HiLux light source, 15” LCD TFT screen, USB/SD memory module, color systems PAL/NTSC, with integrated Image Processing Module, power supply 100 – 240 VAC, 50/60 Hz including:

- USB Silicone Keyboard, with touchpad, US character set
- USB Flash Drive, 4 GB
- Mains Cord
- Mains Cord, US version

Components/Spare Parts see chapter 7
KARL STORZ offers a wide range of instruments for the expected and unexpected difficult airway management. Therefore, it is absolutely necessary to provide a battery light source which fulfills the high standard required in this field. With over 100 lm/approx. 150 klx brightness, 5500 K color temperature and weighing under 120 g, the LED Battery Light Source BRITE LITE sets new standards in airway management. The LED life cycle is approx. 50,000 hours.

“All the brightness you need!”
Battery Light Source LED BRITE LITE
Accessories for Intubation Fiberscopes and Endoscopes

Special Features:
- Battery light source with extremely high light intensity >100 lm / > 150 klx
- Available as battery and rechargeable version
- Absolute white light due to LED technology
- Special light focus allows optimal light adjustment at the endoscope connector

- LED provides up to 50,000 hours lifetime
- Burning time of 120 min
- Waterproof, fully immersible for cleaning and disinfection (11301 D1/D3)

11301 D1  Battery Light Source LED for Endoscopes, with fine screw thread, brightness > 100 lm / > 150 klx, burning time > 120 min, weight approx. 150 g, waterproof and fully immersible for manual cleaning and disinfection, with 2 Photo Batteries 121306 P

11301 D3  Same, with coarse thread

121306 P  Photo Battery, lithium, 3 V, CR 123 A

11301 DE  Battery Light Source LED for Endoscopes, rechargeable, with click connection, brightness > 110 lm / >150 klx, color temperature 5500 K, lithium-ion batteries, charging time 60 min, burning time at 100% brightness 40 min, weight approx. 150 g ready for use, suitable for wipe disinfection

11301 DF  Same, with fast screw thread

11301 DG  Charging Unit, for 11301 DE/11301 DF, for two LED battery light sources, with fixed integrated power supply and adaptor for EU, UK, USA and Australia, power supply 110 – 240 VAC, 50/60 Hz, suitable for wipe disinfection

11301 DH  Holder, for Charging Units 11301 DG, 8546 LE and 8401 XDL
The system allows a changeover of instruments in seconds, a decisive advantage in critical situations. But also in an emergency, where there is no time for video-assisted intubation, we offer the right adaptor solutions. New perspectives for the teaching and further training of medical personnel are also provided. The system design differs considerably from other providers where you can only find so-called “stand-alone” solutions without any compatibility.
BERCI-KAPLAN and DÖRGES

V-MAC® Video Laryngoscope
for visual endotracheal intubation

Special Features:

- Visualization of intubation process through telescope in distal region of laryngoscope blade
- Excellent for teaching and training purposes
- Suitable for difficult intubation
- Exchangeable DCI® video camera in handle
  - bright and clear image
  - rapid changeover to other DCI® video instruments
- Suitable and validated for the following low-temperature reprocessing methods up to a max. of 60 °C: manual/mechanical cleaning and disinfection, sterilization with Steris® AMSCO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards
- The integrated electronic filter of the ENDOVISION® TELECAM (EF) is optimally matched to the video laryngoscope, completely eliminating the Moiré effect
- Compatible with the KARL STORZ ENDOVISION® TELECAM SL product line and TELE PACK X with integrated image processing module

Illustrations may not be to scale.

8401 A/B/K 8401 C

8401 A  BERCI-KAPLAN DCI® Video Laryngoscope, for DCI® technology, with MACINTOSH laryngoscope blade, size 3, angle of view 60°
8401 B  Same, MACINTOSH laryngoscope blade, size 4
8401 C  Same, with DÖRGES emergency laryngoscope blade, universal size
8401 K  Same, with MACINTOSH laryngoscope blade, size 2
BERCI-KAPLAN and DÖRGES

V-MAC® Video Laryngoscope
for visual endotracheal intubation

8401 D/G  BERCI-KAPLAN DCI® Video Laryngoscope, for DCI® technology, with MILLER laryngoscope blade, size 0, angle of view 60°
8401 E  Same, with MILLER laryngoscope blade, size 3
8401 G  Same, with MILLER laryngoscope blade, size 1

8401 H  DÖRGES DCI® Video Laryngoscope, with special curved blade for the difficult airway, DCI® technology, angle of view 60°
What is DCI®?
The DCI® (= Direct Coupled Interface or direct coupling) intubation system offers you all endoscopic possibilities for successful airway management. Our proven endoscope program with a standard eyepiece cup (1) has been expanded to include the DCI® system (2) with direct coupling. You can now operate all of our DCI® video laryngoscopes, flexible intubation fiberscopes and our BONFILS and BRAMBRINK Optical Stylets with a single camera.

How does it work?
The light cable (1) and the signal cable (2) for digital imaging are integrated in the DCI® camera in an ergonomically designed housing. The camera is connected to the DCI® endoscope and ready for use in a single hand movement. The light inlet and imaging ports are positioned on the endoscope side where the eyepiece cup is normally found.

The development of our DCI® video laryngoscope in 2001 was based on the simple idea of integrating an endoscopic system within a standard laryngoscope blade. In this system, the camera is incorporated in an ergonomically designed handle. Various laryngoscopes can be connected to the handle. Anatomical structures are displayed in a magnified form on a monitor. The field of view is enhanced up to 60°, a dramatic improvement over conventional laryngoscopy. The DCI® video laryngoscope is the optimal solution for teaching and training routine intubation under total visual control.

Options in an emergency
With the aid of the DCI® emergency adaptor (1), you can transform any DCI® telescope into a standard telescope with an eyepiece cup (2). You then have the option of connecting a LED battery light source (3) or a conventional light cable (4) to the endoscope.

Compatibility through and through
The practical eyepiece adaptor (1) enables you to transform any DCI® camera into a conventional endoscope camera with an eyepiece cup within seconds. This means that you can use existing instruments and still profit from the benefits offered by the DCI® intubation system.
KARL STORZ provides the instruments you need to meet the special challenges of patients who cannot be intubated using conventional methods. Nasopharyngeal awake intubation is regarded as the gold standard of anticipated difficult airway management. We offer solutions for any challenge!

**Intubation Fiberscope – DCI® version**

Our versatile intubation fiberscopes can be used in all clinical settings whether in the intensive care unit/emergency room or in the case of patients with anticipated difficult airways during induction. The various sheath diameters means that you can always select the ideal instrument for your patient.

**Special Features:**
- Sheath stiffness adapted to anesthesiological requirements
- Suitable for both fiber optic intubation and bronchoscopy
- Patented sheath surface special treatment requires only minimal lubrication and provides optimal tube insertion
- Developed for use in the OR, ICU, ER
- Even safer tube introduction due to video-assisted control on the monitor
- Tube position of ETT, LMA, DLT can be verified
- Video-assisted monitoring for percutaneous tracheostomy
- Adaptable for foreign body removal or bronchial lavage
- Various outer diameters: 2.8; 3.7; 5.2 mm
- Diameter of working channel ranging from 1.2 to 2.3 mm
- Suitable and validated for the following low-temperature reprocessing methods up to a max. of 60 °C: manual/mechanical cleaning and disinfection, sterilization with Steris® AMSCO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards
Intubation Fiberscopes
DCI® Versions

2.8 x 50 Intubation Fiberscope with optimized imaging
The 2.8 x 50 intubation fiberscope is a universal working instrument as it provides gold standard intubation for both adult and pediatric patients. Due to its small diameter, it is an excellent tool for the placement of double lumen tubes. It can be directly connected to the TELE PACK X system with the DCI® II camera head for a monitor-assisted intubation solution that is both mobile and flexible.

Benefits:
- Effective suction possible via the large 1.5 mm working channel
- Suitable for use with endotracheal tubes as of 4 mm
- Increased stiffness and smoother passage of the endotracheal tube
- Ready for immediate use and easy to clean and reprocess

2.8 x 50 Intubation Fiberscope with optimized imaging

Optional Accessories for Intubation Fiberscopes see page 71 and pages 79 ff.
3.7 x 65 Intubation Fiberscope with optimized imaging

The 3.7 x 65 intubation fiberscope is a universal working instrument as it provides gold standard intubation for both adult and pediatric patients. Due to its small diameter, it is an excellent tool for the placement of double lumen tubes. It can be directly connected to the TELE PACK X system with the DCI® II camera head for a monitor-assisted intubation solution that is both mobile and flexible.

Benefits:
- Effective suction possible via the large 1.5 mm working channel
- Suitable for use with endotracheal tubes as of 4 mm
- Increased stiffness and smoother passage of the endotracheal tube
- Ready for immediate use and easy to clean and reprocess

11302 BDD2

**DCI® Intubation Fiberscope 3.7 x 65,**
- Deflection up/down: 140°/140°
- Direction of view: 0°
- Angle of view: 90°
- Working length: 65 cm
- Working channel inner diameter: 1.5 mm
- Distal tip outer diameter: 3.7 mm

Optional Accessories for Intubation Fiberscopes see page 71 and pages 79 ff.
5.2 x 65 Intubation Fiberscope with optimized imaging

The 5.2 x 65 intubation fiberscope creates an ideal balance between image size, working channel size and fiber optics. In case of emergency, suction is possible via the 2.3 mm working channel. The fiberscope is also suitable for removing foreign bodies or for bronchial lavage in the intensive care unit. It can be directly connected to the TELE PACK X system with the DCI® II camera head for a monitor-assisted intubation solution that is both mobile and flexible.

Benefits:
- Effective suction possible via the large 2.3 mm working channel
- Suitable for use with endotracheal tubes > 5.5 mm
- Increased stiffness and smoother passage of the endotracheal tube
- Ready for immediate use and easy to clean and reprocess

Optional Accessories for Intubation Fiberscopes see page 71 and pages 79 ff.

## Accessories included in delivery:

- **27677 A**
  - **Case**

- **11025 E**
  - **Pressure Compensation Cap**, for ventilation during gas sterilization

- **13242 XL**
  - **Leakage Tester**, with bulb and manometer

- **11301 CF**
  - **LIPP Tube Holder**, for intubation fiberscopes

- **29100**
  - **Plug**, for LUER-Lock connector for cleaning, black, autoclavable, package of 10

- **2x 11301 CD**
  - **Irrigation Adaptor**, for machine cleaning, reusable, for fiberscopes

- **11301 CE**
  - **Suction Valve**, for single use, package of 20

- **11275CL2/10**
  - **Cleaning Brush**, tapered, outer diameter 3 – 5 mm, for working channel 1.8 – 2.8 mm, length 116 cm

- **11276CL/10**
  - **Long Cleaning Brush**, for working channel 1.2 – 1.7 mm, length 110 cm

**Instrument Carts** see chapter 5
Unexpected difficult airways are always an additional challenge in airway management. With the BONFILS Optical Stylet and its versatile intubation techniques, this situation can be brought under control. The endotracheal tube is guided into the trachea under direct vision and the possibility of simultaneous application of oxygen provides more safety. KARL STORZ now offers a wide range of BONFILS and BRAMBRINK intubation endoscopes with outer diameters of 2 and 5 mm. All endotracheal tubes from 2.5 mm up to 8 mm can be used with this range of instruments.
BONFILS/BRAMBRINK
Retromolar Optical Stylets
DCI® Versions

Optical Stylets

Special Features:
- Particularly suitable for the unexpected difficult airway
- Use in the case of minimal mouth opening (> 1 cm) possible
- Introduction of the tube under visualization: What you see is what you get!
- Continuous O₂ flow via tube adaptor between tube and instrument
- One-person intubation possible
- Connect and intubate – thanks to the DCI® video intubation system
- Quick and easy cleaning
- Suitable and validated for the following low-temperature reprocessing methods up to bis max. 60 °C: manual/machine cleaning and disinfection, sterilization with Steris® AMSCO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and ETO gas; High-Level Disinfection (HLD) acc. to US standards
- Recommended for video-assisted intubation with the DCI® camera to TELE PACK X
- We offer a complete product range of sizes to accommodate all patients

11605 CV  BONFILS Retromolar DCI® Optical Stylet, with DCI® connection, outer diameter 2 mm, for ETT 2.5 – 3.5 mm, usable sheath length 22 cm, distal bending 40°, including Tube Holder 10332 BA for tube fixation and O₂ application

10331 BD1  BONFILS Retromolar DCI® Optical Stylet, with DCI® connection, outer diameter 5 mm, for ETT > 5.5 mm, usable sheath length 40 cm, distal bending 40°, including Tube Holder 10331 BA for tube fixation and O₂ application

10332 BD1  BONFILS Retromolar DCI® Optical Stylet, with DCI® connection, outer diameter 3.5 mm, for ETT > 4 mm, usable sheath length 35 cm, distal bending 40°, including Tube Holder 10332 BA for tube fixation and O₂ application

Instrument Carts see chapter 5
LED Battery Light Source for Endoscopes (11301 D1/D3), optional, see page 60
TELE PACK X is a compact, portable and flexible system that has been developed for use in a large number of fields. It can be used in doctors’ practices as well as in emergency rooms. The TELE PACK X monitor offers maximum resolution and very high color fidelity for a first-class video playback. To enable swift and easy work, TELE PACK X combines all that is needed: monitor, camera and light source. Consideration has also been given to documentation: integrated data management enables comprehensive recording of examinations or surgical interventions. Multiple USB ports and an SD card slot are available to store the data.

Crystal clear display
- 15" LCD display
- Image rotation
- 24-bit color intensity for natural color rendition
- DVI video output for connecting HD monitors

Flexible storage possibilities
- SD card slot for high storage capacity
- USB ports for external hard drives, USB sticks and post-script printers
- Picture gallery for records
- Playback of saved videos
- Print-ready patient report documentation

Natural illumination
- HiLux 50 Watt high-performance light source
- Natural colour rendition close to daylight with a color temperature of 6000 K
- Up to 1000 hours lamp operating time

Easy control combined with utmost safety
- Membrane keyboard for wipe-down disinfection
- Hot keys for rapid and direct adjustment
- Arrow keys for intuitive control
- Connection socket for pedal control

Additional information
- Sturdy, portable housing
- Ergonomically designed handle for convenient transport
- World power supply unit: 100 – 240 VAC, 50/60 Hz
- Dimensions (w x h x d): 450 x 350 x 150 mm
- Weight: 7 kg
**TELE PACK X**  
Sample Configuration

---

**20 0450 01-EN** TELE PACK X, endoscopic video unit for use with TELECAM one-chip camera heads and video endoscopes, incl. 50 W HiLux light source, 15" LCD TFT screen, USB/SD memory module, color systems PAL/NTSC, with integrated Image Processing Module, power supply 100 – 240 VAC, 50/60 Hz.

including:
- **USB Silicone Keyboard**, with touchpad, US character set
- **USB Flash Drive**, 4 GB
- **Mains Cord**
- **Mains Cord**, US version

## Additional Fiber Optic and Fluid Light Cables

See catalog TELEPRESENCE.
Accessories
for Flexible Intubation Fiberscopes

11301 CA  Leaflet Valve, for single use, package of 20

11301 CB  Suction Valve, reusable

11301 CD  Irrigation Adaptor, for machine cleaning, reusable, for fiberscopes

11301 CE  Suction Valve, for single use, package of 20

6927691  Adaptor for Two-Way Stopcock, Luer-Lock, with O₂ tube connection

600007  Luer-Lock Tube Connector, male, tube diameter 6 mm

11301 CF  Lipp Tube Holder, for intubation fiberscopes
KARL STORZ offers a wide range of instruments and possibilities to ensure that airway management is successful. The broad range of KARL STORZ products offers you all possibilities – for dealing with standard or unexpectedly difficult intubation. In addition, all of our fiberscopes are powered by a LED battery light source, ensuring that even in an emergency you will never be left in the dark.
C-MAC® Video Laryngoscope
C-MAC® Video Laryngoscope
for visual endotracheal intubation

Monitor/Electronic Module

Special Features:
- Resistant ABS plastic housing
- Splash-proof according to IP54
- 7" TFT wide view angle display with resolution of 800 x 480 pixels
- Ready for use within seconds
- Documentation of still images (JPEG) and videos (MPEG4) on SD memory card
- VESA 75 norm for connecting and attaching racks
- Soft keys enable use within seconds
- Cinch video output for connecting external monitor
- System open for further components
- Operating time with lithium-ion batteries of about 2 hours
- World power supply 100 – 240 VAC, 50/60 Hz
- Operation with line voltage and rechargeable lithium-ion batteries
- Processing of the electronic module: Suitable and validated for the following low-temperature reprocessing methods up to bis max. 60 °C: manual/machine cleaning and disinfection, sterilization with Steris® AMSO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards
- Additional standards: RTCA/DO-160F, EMI Test Report (German air rescue service DRF Luftrettung)

8402 ZX-1
Monitor for CMOS Endoscopes, screen size 7", documentation can be stored directly on SD card, rechargeable Li-Ion batteries, power adaptor for EU, UK, USA and Australia, power supply 110 – 240 VAC, 50/60 Hz, additional standards: RTCA/DO-160F, EMI Test Report (German air rescue service DRF Luftrettung), suitable for wipe disinfection

8402 X
Electronic Module, for C-MAC® Monitor 8402 ZX-1, for use with C-MAC® video laryngoscopes
BERCI-KAPLAN
C-MAC® Video Laryngoscope
for visual endotracheal intubation

Video Laryngoscope

Special Features:
● European closed laryngoscope blade design
● Angle of view approx. 80°
● Ergonomically designed handle
● CMOS technology with LED illumination
● Proximal slanted blade
● Available with or without suction
● Processing video laryngoscopes: suitable and validated for the following low-temperature reprocessing methods up to bis max. 60 °C: manual/machine cleaning and disinfection, sterilization with Steris® AMSCO V-PRO 1, Sterrad® (50S, 100S, 200S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards

● Blade tips of all blade types visible for safe navigation

MACINTOSH
● For direct and indirect laryngoscopy
● Original English MACINTOSH blade shape

D-BLADE
● Special curved blade shape for difficult intubation

MILLER
● For pediatrics and neonatology in the day-to-day clinical routine, teaching and training as well difficult airway management

NEW
8401 DXC
MILLER C-MAC® Video Laryngoscope, CMOS technology, size 0, for use with Electronic Modules 8401 X and 8402 X

NEW
8401 GXC
Same, size 1

8401 KXC
BERCI-KAPLAN C-MAC® Video Laryngoscope #2, CMOS technology, with MACINTOSH laryngoscope blade, size 2, for use with Electronic Modules 8401 X and 8402 X

8401 AXC
Same, size 3

8401 BXC
Same, size 4
BOEDEKER-DÖRGES
C-MAC® Video Laryngoscope
for visual endotracheal intubation

8401 AX  BOEDEKER-DÖRGES C-MAC® Video Laryngoscope #3, CMOS technology, with MACINTOSH laryngoscope blade, size 3, with catheter introduction sizes 14 – 16 Fr., for use with Electronic Modules 8401 X and 8402 X

8401 BX  Same, size 4, with catheter introduction sizes 16 – 18 Fr.

8401 HX  C-MAC® Video Laryngoscope D-BLADE, CMOS technology, with DÖRGES laryngoscope blade, for difficult intubation, with catheter introduction sizes 16 – 18 Fr., for use with Electronic Modules 8401 X and 8402 X
C-MAC® S for single use has the same outstanding features that distinguish C-MAC® metal performance blades. As a result, great value was also attached to maintaining the original MACINTOSH blade design. The D-BLADE is, of course, available as C-MAC® S. The imager enables blades to be exchanged within seconds and, as a camera, it forms the interface to the C-MAC® monitor. The C-MAC® S video laryngoscope is just as flexible and mobile as other C-MAC® laryngoscopes. Consequently, the instrument is ideally suited for all emergency and preclinical situations as it practically eliminates the need for complex transportation and re-processing procedures. With C-MAC® S you continue to profit from all the familiar benefits offered by the C-MAC® system: the only difference is that the C-MAC® S blade is designed for single use.
C-MAC® S Video Laryngoscope

Video Laryngoscope for Single Use

Special Features:
- Blade and handle form one continuous piece: optimum protection against infections
- D-BLADE with short handle
- Original English MACINTOSH blade shape
- Sturdy plastic material
- Compatible with C-MAC® monitor
- Blade tip always under direct view for safe navigation
- Ergonomically designed handle
- Compact design

C-MAC® S Imager:
- Handling oriented towards hygiene
- Reprocessing of the imager: suitable and validated for the following low-temperature reprocessing methods up to bis max. 60 °C: manual/machine cleaning and disinfection, sterilization with EtO gas; High-Level Disinfection (HLD) acc. to US standards
- Compatible with C-MAC® monitor
- Blade can be exchanged within seconds

051113-10* BERCI-KAPLAN C-MAC® S Video Laryngoscope MAC #3, with MACINTOSH laryngoscope blade, size 3, for single use, sterile, package of 10, for use with C-MAC® Monitor 8402 ZX-1 and C-MAC® S Imager 8402 XS

051114-10* Same, size 4

mtp medical technical promotion gmbh, Take-Off GewerbePark 46, D-78579 Neuhausen ob Eck, Germany
C-MAC® S Video Laryngoscope

051116-10

C-MAC® S Video Laryngoscope D-BLADE, with DÖRGES laryngoscope blade, sterile, package of 10, for use with C-MAC® Monitor 8402 ZX-1 and C-MAC® S Imager 8402 XS

8402 XS

C-MAC® S Imager, for C-MAC® Monitor 8402 ZX-1, suitable for manual and mechanical disinfection up to 60 °C and High-Level Disinfection (HLD) acc. to US standards, for use with C-MAC® S-Video Laryngoscopes 051113-10, 051114-10 and 051116-10

mtp medical technical promotion gmbh,
Take-Off GewerbePark 46, D-78579 Neuhausen ob Eck, Germany
The new C-MAC® PM is so small, flexible and mobile that it fits into any pocket. This video laryngoscope is as easy to use as a direct laryngoscope, yet offers all the advantages of indirect laryngoscopy.

Robust and easy to handle, the C-MAC® PM is suitable for preclinical use. Moreover, its compactness makes it ideal for various emergency situations. The pocket monitor was specifically developed for special preclinical and clinical emergency situations; its 2.4” monitor delivers a contrast-rich image even in bright sunlight. Consequently, it is the ideal complement to the C-MAC® system.
C-MAC® PM – The Pocket Monitor

Special Features:
● Exchange of video laryngoscope within seconds
● Compatible with all C-MAC® video laryngoscopes (D-BLADE, MACINTOSH sizes 2-4, MILLER sizes 0 & 1)
● One hour operating time
● Rechargeable Li-ion battery with capacity control and intelligent power management
● High-resolution 2.4" LED display with 240 x 320 pixels for optimal view
● No additional on/off buttons thanks to the “Open-to-Intubate-Display” (OTI)
● Important for preclinical use: classified for protection class IPX8
● Due to the closed design, the entire pocket monitor unit can be fully immersed in disinfection solution which allows for easy and smooth reprocessing
● Suitable and validated for the following low-temperature reprocessing methods up to max. 60 °C: manual/mechanical cleaning and disinfection
● Additional standard: RTCA/DO-160F

8401 XDK C-MAC® Pocket Monitor, Set, unit with LCD monitor and power supply for all C-MAC® laryngoscopes, screen size 2.4", monitor movable via two rotation axis, rechargeable Li-Ion batteries, 1 h operation time, 2 h charging time, power management with capacity indicator: switches off automatically after 10 min, protection class IPX8, additional standard: RTCA/DO-160F, validated for up to a max. of 60 °C, manual/mechanical cleaning and disinfection, for use with C-MAC® video laryngoscopes including:
Protection Cap

8401 XDL Charging Unit, for C-MAC® Pocket Monitor 8401 XD, with fix integrated power supply and adaptor for EU, UK and USA, power supply 110 – 240 VAC, 50/60 Hz, suitable for wipe disinfection

Intubation Set -C22-, Model ULM 8400 B and Bag for Intubation Set -C22-, Model ULM 8402 YE see pages 6-7
Components/Spare Parts see chapter 7
The new flexible 5.5 x 65 intubation video endoscope from KARL STORZ sets a new direction for airway management. The convenient 4:3 rectangular image format provides a better overview of the working area. Similar to the C-MAC® video laryngoscope, the 5.5 x 65 scope delivers clear, pixel-free images without a Moiré pattern. The flexible intubation endoscope can be directly connected to the C-MAC® monitor. This enables immediate changeover to the video laryngoscope, if required. The flexible 5.5 x 65 intubation video endoscope is a further component within the C-MAC® system.
FIVE – Flexible Intubation Video Endoscope for C-MAC®

Special Features:
- Compatible with C-MAC® monitor and C-HUB™
- Compact design
- Ergonomically designed handle
- Lightweight at 385 g
- High image resolution
- Video imaging in 4:3 format
- Possible to exchange components within seconds
- Integrated LED light source
- Suitable and validated for the following low-temperature reprocessing methods up to max. 60 °C: manual/machine cleaning and disinfection, sterilization with Sterrad® (100S, NX, 100NX) and EtO gas; High-Level Disinfection (HLD) acc. to US standards

11301 BNX Flexible Intubation Video Endoscope 5.5 x 65,
CMOS technology, with suction valve, for use with C-MAC® Monitor 8402 ZX-1 and C-HUB™ 20 2901 01
Deflection up/down: 140°/140°
Direction of view: 0°
Angle of view: 85°
Working length: 65 cm
Total length: 93 cm
Working channel inner diameter: 2.3 mm
Distal tip outer diameter: 5.5 mm
Accessories
Flexible Intubation Video Endoscopes

29100 Plug, for LUER-Lock connector for cleaning, **black**, **autoclavable**, package of 10

11301 CD1 Irrigation Adaptor, for machine cleaning, reusable, for Flexible Intubation Video Endoscope 11301 BNX

11301 CE1 Suction Valve, for single use, package of 20, for use with Flexible Intubation Video Endoscope 11301 BNX

11301 CFX Tube Holder, for use with Flexible Intubation Video Endoscope 11301 BNX

27677 FV Case

11025 E Pressure Compensation Cap, for ventilation during gas sterilization

13242 XL Leakage Tester, with bulb and manometer

11276CL/10 Long Cleaning Brush, for working channel 1.2 – 1.7 mm, length 110 cm

8401 YZ Protection Cap, for the C-MAC® video laryngoscope and electronic module, to protect plug contact during reprocessing, cap is reusable

C-MAC® Video Laryngoscope

- **8402 YD**
  - **Protective Bag**, blue, for C-MAC® system, made of water-resistant and sturdy material, washable, separate compartments for the monitor and two C-MAC® video laryngoscopes with electronic module

- **8402 YD-1**
  - **Same**, red

- **8402 YD-2**
  - **Same**, orange

- **8402 YD-3**
  - **Same**, NATO-olive

- **809125**
  - **MAGILL Forceps**, modified by BOEDEKER, length 25 cm, suitable for endoscopic foreign body removal, for use with video laryngoscopes size 2 – 4

- **NEW 809120**
  - **MAGILL Forceps**, for children, modified by BOEDEKER, length 20 cm, for use with video laryngoscopes size 1 and 2

- **39501 LC2**
  - **Wire Tray for Cleaning, Sterilization and Storage** for two C-MAC® and D-BLADE video laryngoscope blades incl. electronic module, with holder for fixing and sealing electrical connections, external dimensions (w x d x h): 260 x 120 x 170 mm

- **8401 YZ**
  - **Protection Cap**, for the C-MAC® video laryngoscope and electronic module, to protect plug contact during reprocessing, cap is reusable

*Crash test carried out by Furtwangen University of Applied Sciences (Germany): C-MAC® system in a protective bag dropped from a height of 5 – 9 meters showed no noteworthy damage.*

**Please note:** The instruments displayed are not included in the sterilization and storage tray.
Nothing could be easier!

C-CAM™ transforms the C-MAC® video laryngoscope into an all-round system unit for complete airway management. The C-MAC® monitor is at the core of all imaging systems. C-CAM™ is a high-grade CMOS camera with VGA resolution which can be connected to all KARL STORZ endoscopes with eyepieces. Illumination is ensured through the Power-LED battery light sources. Consequently, this is the first battery-powered video system to guarantee high-quality documentation. KARL STORZ has once again proven that high quality and mobility are not mutually exclusive.

The C-HUB™ is the interface for computer and/or monitor connectivity. The signal from the front end is transmitted directly to a computer or monitor with the aid of the C-HUB™. The enhanced output can be directly linked to any computer via a USB/S-VHS connection. Thanks to the safety offered by galvanic isolation in the C-HUB™, medical products can now be connected to non-medical products (e.g. computer/monitor).

C-HUB™ is the perfect signal converter from C-MAC®/C-CAM™ to USB or S-Video.
**C-CAM™ and C-HUB™**

**20 2901 32**  
**C-CAM™ Camera Head**, 8-pin, one-chip CMOS camera head, resolution 640 x 480, focal length f = 20 mm, compatible with C-HUB™ 20 2901 01 and C-MAC® 8402 ZX-1

**20 2901 31**  
**C-CAM™ Camera Head**, 6-pin, one-chip CMOS camera head, resolution 640 x 480, focal length f = 20 mm, compatible with C-MAC® 8401 ZX

**20 2901 01**  
**C-HUB™ Camera Control Unit**, for use with C-CAM™ 20 2901 32, Electronic Module 8402 X or compatible CMOS video endoscopes, Interfaces: USB 2.0, S-Video output (NTSC), power socket including:  
- **C-HUB™ Power Supply**  
- S-Video (Y/C) Connecting Cable  
- USB Connecting Cable

*Components/Spare Parts* see chapter 7
BRONCHOSCOPIES AND TRACHEOSCOPIES
FOR FOREIGN BODY REMOVAL
Foreign Body Removal

Rigid Tracheo-Bronchoscopy for Foreign Body Extraction

Rigid endoscopy is an indispensable and accepted technique for removing solid foreign bodies (FB) from the central airway. The acute aspiration of foreign bodies lodged in the lumen is potentially life-threatening. Foreign body aspiration occurs most frequently in young children and the elderly. Of the broad spectrum of FB, foodstuffs are most commonly aspirated. A distinction is made between organic, inorganic, radiopaque and non-radiopaque FB.

Characteristic of foreign body aspiration is a sudden fit of coughing and asphyxiation followed by respiratory distress or an asymptomatic interval. FB may lodge in the larynx, trachea or bronchi, however, they can also approach the bifurcation of the trachea. The exchange of gas is affected to a greater or lesser degree. Anamnesis, a clinical examination or an imaging procedure leads to diagnosis. An esophageal foreign body should be ruled by differential diagnosis.

If the presence of a FB in the airway is confirmed, rigid endoscopy should be mainly employed, especially in children, patients having difficulty breathing, or for retrieving a FB which is large, sharp, capable of expanding or multiple FBs. If the presence of a FB cannot be confirmed, diagnosis can be backed up or dismissed either by means of a flexible fiberbronchoscope (FFB) requiring topical anesthesia or a standard larynx mask under general anesthesia.

Primary FB extraction with the FFB is justified in the case of a small FB, stable gas exchange and available instrumentation. If the FFB is inserted through the rigid endoscope tube, both techniques ideally complement each other, especially in the case of peripheral FB localization. Even when there are factors against the use of rigid endoscopy (instable/immobile neck, complete lockjaw), the FFB is still the instrument of choice, if necessary in conjunction with invasive measures such as surgical tracheotomy. Thoracic surgical interventions are the exception and are usually necessary in the case of complications caused by a chronic FB.

For laryngeal or tracheal FB localization, the rigid emergency tracheoscope or another tracheoscope of a suitable size and length is employed. The rigid bronchoscope, which has side vents on the lower end of the scope to aid the contralateral approach to ventilation, is suitable for retrieving a FB lodged in the lower tracheal and bronchial areas due to its length.

Any rigid endoscope that can be positioned beneath the glottis can function as a stable working and ventilation channel and, thus, stabilize the airway. In comparison to a FFB inserted via a tracheal tube, the qualitatively better HOPKINS® telescopes used in conjunction with optical forceps are suitable. The wide range of instruments available allows precise, atraumatic, effective endoscopy without pressure of time. The suction capacity is unmatched.

In rigid endoscopy, an adapted Total Intravenous Anesthesia (TIVA) with appropriate standard monitoring is recommended for patients of any age group. The Klein endoscope model – regardless of the respiration method used – enables respiratory monitoring, primarily as capnography, thus offering respiration control not previously feasible. Depending on the respiration procedure used (manual positive pressure ventilation, automatic low or high frequency jet ventilation), simultaneous handling of instruments and ventilation is possible. Rigid tracheo-bronchoscopy in children requires great caution and skill.

The anesthesiologist experienced in upper airway management and FFB is predestined to learn the skills necessary to handle the “rigid scope” from colleagues in other specialist disciplines. The emergency tracheoscope (intubation tracheoscope, “emergency tube”) or another rigid endoscope is considered to be the ultimate ratio in the “cannot intubate – cannot ventilate” situation, if the larynx mask or combitube is not effective, or prior to invasive airway access (coniotomy).

R. GOTTSCHELL, M. D.,
Klinik für Anästhesiologie und Intensivtherapie,
Klinikum der Friedrich-Schiller-Universität, Jena, Germany
Universal Bronchoscopes for Adults
Standard model with fiber optic light carrier for distal illumination

- **Universal Bronchoscope**, with Fiber Optic Light Carrier 10318 L, size 8.5, length 43 cm
- **Same**, size 7.5
- **Same**, size 6.5
- **Glass Window Plug**
- **Rubber Telescope Guide**
- **FLUVOG Adaptor**, with sliding glass window plug, sealing cap, notched lens and keyhole opening, movable
- **Injection Cannula**, for positive pressure assisted ventilation system, Luer-Lock, outer diameter 3.5 mm
- **Instrument Guide**, for suction catheter
- **Adjustable Magnifier, autoclavable**, swing-away type, with ring adaption
- **Adaptor**, for respirator
- **Adaptor**, for respirator, long version
Special Features:
- The jaws of the forceps and the region of biopsy are well visualized prior to and during the procedure
- Foreign bodies can now be removed quickly under optical control
- With anti-fogging device for the telescope

For use with bronchoscopes for adults 10318 B/C/D and 10318 BP/CP/DP:

10320 AA  HOPKINS® Straight Forward Telescope 0°, diameter 5.5 mm, length 50 cm, autoclavable, fiber optic light transmission incorporated, color code: green
10320 BA  HOPKINS® Forward-Oblique Telescope 30°, diameter 5.5 mm, length 50 cm, autoclavable, fiber optic light transmission incorporated, color code: red
10350 HF  Optical Forceps, alligator, for hard foreign bodies, large jaws, with spring-action handle
10350 KF  Optical Forceps, for peanuts and soft foreign bodies, with spring-action handle
10350 L   Optical Forceps, spoon-shaped, round, for biopsy
10350 U   Optical Forceps, universal, for biopsy, for the removal of foreign bodies and denatured tissue
10350 MS  Optical Forceps, large jaws, blunt, serrated, for removing large foreign bodies, for use with HOPKINS® Telescope 10320 AA
Universal Bronchoscopes for Adults

with proximal illumination

Special Features:
● Absence of distal light carrier does not restrict inner diameter
● Prismatic Light Deflector 10101 FA inserted proximally ensures best illumination and enables full use of lumen through operating instruments
● Excellent view of operation area
● Smooth lumen allows insertion of flexible bronchoscopes

10318 BP  Bronchoscope Tube Universal, without distal fiber optic light carrier, for use with proximally insertable Prismatic Light Deflector 10101 FA, size 8.5, length 43 cm

10318 CP  Same, size 7.5

10318 DP  Same, size 6.5

10101 FA  Prismatic Light Deflector, autoclavable, with connection to fiber optic light cable

10314 BM  Glass Window Plug

10314 BN  Rubber Telescope Guide

10314 P  FLUVOG Adaptor, with observation window, cap with rubber seal and with window, adjustable

10318 K  Injection Cannula, for positive pressure assisted ventilation system, Luer-Lock, outer diameter 3.5 mm

10318 S  Instrument Guide, for suction catheter

10924 D  Adaptor, for respirator

10924 DL  Adaptor, for respirator, long version
Optical Forceps

Special Features:
- The jaws of the forceps and the region of biopsy are well visualized prior to and during the procedure.
- Foreign bodies can now be removed quickly under optical control.
- The spring-action handle of the grasping forceps prevents excess pressure being applied to the foreign body.
- The depth of cut during biopsy is much easier to assess.

For use with HOPKINS® Telescope 10328 AA and Universal Bronchoscopes 10318 B – DP, size 8.5 to 6.5

10328 AA  HOPKINS® Straight Forward Telescope 0°, diameter 4.5 mm, length 50 cm, autoclavable, fiber optic light transmission incorporated, color code: green

10352 H  Optical Forceps, alligator, for hard foreign bodies

10352 KF  Optical Forceps, for peanuts and soft foreign bodies, with spring-action handle

10352 L  Optical Forceps, spoon-shaped, round, for biopsy

10352 U  Optical Forceps, universal, for biopsy, for removal of foreign bodies and denatured tissue
Pediatric Bronchoscopes for proximal illumination

Special Features:
- Absence of distal light carrier does not restrict inner diameter
- Prismatic Light Deflector 10101 FA inserted proximally ensures best illumination and enables full use of lumen through operating instruments
- Excellent view of operation area
- Lateral channel for introducing suction catheters and fine instruments

**DOESL-HUZLY Bronchoscope**

**Glass Window Plug**

**Rubber Telescope Guide**, for use with telescopes and optical forceps

**FLUVOG Adaptor**, with sliding glass window plug, sealing cap, notched lens and keyhole opening, movable

**Guide Piece**, for suction catheter, short, bronchoscope for children and infants

**Adjustable Magnifier, autoclavable**, swing-away type, with ring adaption

**Adaptor**, for respirator

**Adaptor**, for respirator, long version

**Injection Cannula**, for positive pressure assisted ventilation system, LUER-Lock, outer diameter 3.5 mm

**Injection Cannula**, for positive pressure assisted ventilation system, LUER-Lock, outer diameter 2.7 mm, for use with Bronchoscopes 10339 E/EE/F
Optical Forceps and Scissors
for Pediatric Bronchoscopes size 6 – 3.5, length 30 cm – 18.5 cm

Special Features:
● Newly designed forceps enable removing of foreign bodies under precise optical control not previously possible
● Small size of forceps allows them to be introduced through pediatric bronchoscopes as of size 3.5 and larger in lengths ranging from 18.5 up to 30 cm

For use with HOPKINS® Telescope 10324 AA and Bronchoscopes 10339 A – CD

10324 AA
   HOPKINS® Straight Forward Telescope 0°, diameter 2.9 mm, length 36 cm, autoclavable, fiber optic light transmission incorporated, color code: green

10378 CF
   Optical Forceps, 2 x 2 teeth, for grasping coins and flat foreign bodies, with spring-action handle

10378 HF
   Optical Forceps, alligator, for grasping hard foreign bodies, with spring-action handle

10378 KF
   Optical Forceps, with KILLIAN bean jaws, for grasping peanuts and soft foreign bodies, with spring-action handle

10378 KSF
   Optical Forceps, VANCOUVER model, for grasping peanut fragments and soft foreign bodies, with spring-action handle

10378 L
   Optical Forceps, spoon-shaped, for biopsy

10378 S
   Optical Forceps

10378 U
   Optical Scissors

10378 M
   Optical Forceps, universal, for biopsy and foreign bodies removal

10378 L/S/U/M
   Optical Forceps, spoon-shaped, oval, for biopsy, large model

AN-BRO 8
Optical Forceps
for Pediatric Bronchoscopes size 4 – 3.5, length 26 cm – 18.5 cm

Special Features:

- Newly designed forceps for hard and soft foreign bodies enable removal under precise optical control not previously possible
- Small size of forceps allows them to be introduced through pediatric bronchoscopes as of size 3.5 cm and larger in lengths of 26 cm – 18.5 cm

- Foreign bodies can be removed quickly and with utmost safety
- Better assessment of the depth of cut when taking biopsies

For use with HOPKINS® Telescope 10020 ATA and Bronchoscopes 10339 CC/GG/DD/D

10020 ATA  HOPKINS® Straight Forward Telescope 0°, diameter 2.9 mm, length 30 cm, autoclavable, fiber optic light transmission incorporated, color code: green

10377 CF  Optical Forceps, 2 x 2 teeth, for grasping coins and flat foreign bodies, with spring-action handle

10377 HF  Optical Forceps, alligator, for grasping hard foreign bodies, with spring-action handle

10377 KF  Optical Forceps, with KILLIAN bean jaws, for grasping peanuts and soft foreign bodies, with spring-action handle

10377 L  Optical Forceps, spoon-shaped, for biopsy

10377 U  Optical Forceps, universal, for biopsy and foreign bodies removal
**Bronchoscopic Forceps**
double action jaws

For use with Bronchoscopes 10318 B/C/D and 10318 BP/CP/DP:

**Accessories for Bronchoscopy**

**Instruments for Aspiration, Irrigation and Thin Needle Biopsy**

- **10432 N**  
  **Aspirator**, for collecting secretions, with cut-off hole, with Spare Glass 10432 E, can be connected to suction tubes or suction catheters

- **10432 T**  
  **Same**, without cut-off hole

- **10432 ED**  
  **Collection Device**, plastic, for single use, with lid, package of 100, for use with HUZLY Aspirator and Bronchus Irrigator 10434 and Intermediate Ring 10434 Z

- **10434**  
  **HUZLY Aspirator and Bronchus Irrigator**, with Graduated Container 10455 A and Rubber Bulb 437000. After switching manifold from "Irrigation" to "Suction", the injected irrigation fluid is immediately withdrawn again together with the bronchial secretion

- **10434 A/B**  
  **Suction Tube**, diameter 4 mm, length 50 cm, for use with HUZLY Aspirator and Bronchus Irrigator 10434

- **10434 A**  
  **Same**, diameter 3 mm, length 35 cm

- **10386 A/B**  
  **Foreign Body Basket**, with ring handle, working length 50 cm

- **10386 A**  
  **Same**, working length 35 cm
Rigid Intubation Tracheoscope

The intubation tracheoscope (emergency tracheoscope, “emergency tube”, ventilating laryngoscope) is regarded as a standard instrument in ear, nose, and throat medicine for various clinical situations and patients of every age group (Meyer 1995; Blazon and Schuss 2001). It combines the features of a direct, straight laryngoscope blade and a rigid tracheoscope. A battery-operated handle provides illumination at the distal end, thus enabling operation without an AC power connection. A cold light source (8546 F) is optional and qualitatively better. The lateral approach, in which a short tube (together with the norm connector) is attached to the anesthesia circuit system or respiratory balloon, enables ventilation as soon as the proximal end of the tube is sealed. Possible leakage can be compensated for by a high flow of fresh gas or tamponage of the pharynx.

Handling is similar to that of the straight intubation blade. The instrument can be used with both hands. An extreme lateral (retromolar) passage through the oropharynx allows faster access to the larynx and relieves pressure on the maxillary region. Following visualization of the glottis, passage through the vocal cords as far as the tracheal lumen is achieved under visual control by rotating the angulated tube by 90° in axis. This procedure can be practised on a intubation trainer or on elective patients.

The instrument has the following advantages and disadvantages:

The advantages are that it can be put to immediate use; requires little space in the oropharynx; allows permanent visual control; overcomes stenosis resulting from axial and tangential force; enables immediate ventilation once trachea is reached; permits the use of rigid forceps and suction tubes with a large diameter; provides the option of secondary intubation via airway exchange catheters; allows the combined use of rigid and flexible telescopes which can be viewed on video (expansion of field of view, binocular view, supervision); and ensures airway stabilization if tracheal intubation is obstructed (subglottal stent).

The disadvantages are the unaccustomed and restricted monocular field of view, potential injury and the general arguments against using the rigid scope. A potential risk of aspiration due to the absence of tracheal sealing does not seem particularly relevant to clinical practice.

Errors in airway management continue to be the main causes of serious complications (Krier and Runck 2002). Anesthesiologists are less familiar with the significance of the intubation tracheoscope in upper airway management, especially in “cannot intubate-cannot ventilate” situations. The domain of flexible fiberoptic intubation (elective awake intubation) in difficult airway management is undisputed. However, there are limitations which raise questions about the use of flexible instruments (respiratory emergency, limited view, if suction capacity is exceeded, or in the case of impossible intubation due to severe narrowing) which require the use of alternative procedures. Sudden, unpredicted, and unexpected difficult airways where neither intubation with conventional intubation aids, face masks and pharyngeal airway, nor larynx masks and combitubes achieve emergency oxygenation, are indications for coniotomy. A typical example is a distended supraglottal tumour (Henn-Beilharz 2001; Schwarzkopf et al 2001). If no anatomical landmarks are evident in the throat (perforating/blunt trauma, excessive soft tissue hematoma), a timely invasive procedure may fail. In the algorithm of unexpected difficult airway, the “rigid scope” should serve as an indication for temporary airway stabilization or as an alternative to or preceding (emergency) coniotomy and/or secondary tracheostomy to enable temporary translaryngeal stabilization for the purposes of oxygenation or ventilation. For these reasons, the intubation tracheoscope or any other suitable rigid tracheoscope can be recommended as a complementary instrument for airway management in fields other than ENT. In individual cases, coniotomy and/or surgical tracheostomy is thus avoidable.

10313 AM  Emergency Tracheoscope, with fiber optic light carrier, size 9, outer diameter 11.2 mm, length 25 cm
10313 DM  Same, size 7, outer diameter 9.2 mm, length 20 cm
10313 EM  Same, size 5, outer diameter 7.5 mm, length 20 cm

10314 BN  Rubber Telescope Guide
10314 BM  Glass Window Plug

807520  Adaptor for Ventilation

8546  Handle Sleeve, ISO 7376, autoclavable, length 12 cm, for use with Battery Inserts 8546 A, 8546 LD, 8549 LD and cold light laryngoscopes

8546 A  Battery Insert, length 12 cm, with 2 Batteries 121306 S and Xenon Lamp 8546 XA

121306 S  Batteries, Baby-Cell, LR 14, for Battery Inserts 8544 A and 8546 A, package of 2

For use with Cold Light Fountain

8546 F  Handle, with connector pin for fiber optic light cable

495 NL  Fiber Optic Light Cable, diameter 3.5 mm, length 180 cm

Recommended HOPKINS® telescopes:

for 10312 AM/10312 DM: Telescopes 10320 AA/10320 BA
for 10312 HM/10312 JM: Telescopes 10324 AA/10324 BA
for 10312 KM: Telescope 10020 ATA
for 10313 AM/10313 DM/10313 EM: Telescope 10020 ATA
Emergency Bronchoscopes, Emergency Tracheoscopes

For Bronchoscopes and Tracheoscopes length 30 or 20 cm:

10372 UL  Forceps, universal, for biopsy and foreign bodies removal, double action jaws, sheath diameter 1.5 mm, working length 35 cm

10381 B  Suction Tube, straight, with rubber tip, diameter 2 mm, working length 35 cm

10385 B  Sponge Holder, working length 35 cm

Minimum Instrument Set for Bronchoscopes length 40 cm:

10371 UL  Forceps, universal, for biopsy and foreign bodies removal, double action jaws, sheath diameter 2 mm, working length 45 cm

10381 A  Suction Tube, straight, with rubber tip, diameter 4 mm, working length 50 cm

10385 A  Sponge Holder, working length 50 cm
Handles with LED Light Source
for Cold Light Laryngoscope Blades

Special Features:
- Rechargeable lithium-ion batteries
- Extremely bright LED of more than 50 lm/> 100 klx
- Absolute white light due to LED technology (5500 K)
- Small handle with photo battery

8546 Handle Sleeve, ISO 7376, autoclavable, length 12 cm, for use with Battery Inserts 8546 A, 8546 LD, 8549 LD and cold light laryngoscopes

8546 LD1 Battery Insert, rechargeable, length 12 cm, for Handle Sleeve 8546, with high-power LED, 56 lm/> 100 klx, lithium-ion battery insert, burning time at 100% brightness 240 min, charging via Inductive Charging Unit 8546 LE

NEW 8549 LDX Battery Insert Set LED, length 12 cm, for Handle Sleeve 8546 and cold light laryngoscopes, with high-power LED, > 56 lm/> 100 klx, burning time at 100% brightness > 120 min
including:
Battery Insert, high-power LED
2x Battery, Mignon-Cell, LR 06, 1.5 V
Cap

8546 LE Inductive Charging Unit, for two battery inserts (8546 LD1, 8544 B, 8545 B, 8547 B), with fully integrated mains adaptor and power adaptor for EU, UK, USA and Australia, power supply 110 – 240 VAC, 50/60 Hz, suitable for wipe disinfection

Components/Spare Parts see chapter 7
Instrument Cart

29005 BWK  **Basic Equipment Cart**,  rides on 4 antistatic dual wheels, 2 equipped with locking brakes, main switch in side boom, 1x drawer unit with lock, integrated cable conduit in both vertical beams, 2x horizontal cable conduits, one with cable manager, 1x set of non-sliding stands for units
Dimensions:
- Equipment cart: 530 x 1090 x 645 mm (w x h x d),
- Shelf: 430 x 480 mm (w x d),
- Caster diameter: 125 mm

**Please note:** The displayed instruments are not included with the instrument cart.
Accessories for Instrument Cart 29005 BWK

- **29005 IFH** **Holder for Flexible Endoscopes**, for mounting to standard tubes, incl. installation accessories
- **11301 BC** **ProShield Protective Tube**, for flexible telescopes, for single use, unsterile, distal closed, package of 10, for use with Holder for Flexible Endoscopes 29005 IFH
- **10330 BE** **Fixation Device**, for Holder 10330 BC/BD to Standard Equipment Rail 29003 GS, 25 x 10 mm
- **10330 BC** **Holder**, for BONFILS Retromolar Intubation Fiberscope 10330 B, made of plexiglass, distal open
- **29005 KH** **Camera Holder**, adjustable height, can be installed in T-grooves of leg columns, suitable for all KARL STORZ endoscopy cameras
- **29005 KHN** **Camera Mount**, for mounting to Standard Equipment Rail 29003 GS, suitable for all KARL STORZ endoscopy cameras
29005 SKO  **Drawer Unit with Lock**, load capacity max. 50 kg, dimensions: 430 x 125 x 480 mm (w x h x d), for Equipment Cart 29005 HNO/AN/BWK/GI/BGI/DRS

29003 S  **Irrigator Rod**, with 4 bottle hooks, for mounting to equipment cart series 29005, incl. two multifunctional holders, length 130 cm

29003 GS  **Standard Equipment Rail**, for mounting on side with equipment carts of series 29003 and 29005

ET03-0337088  **Pulley**, for mounting standard bars with diameter 25 mm, for use with Equipment Rail 29003 GS

29003 PBK  **Power Box**, socket board with 6 mains sockets, 6 grounding plugs for Equipment Carts 29005 HNO/AN/BGI/BWK

29003 TBK  **Isolation Transformer**, 230 VAC, 1200 VA, 6 special mains socket expulsion fuses, 6 grounding plugs, for Equipment Cart 29005 DRS/BGI/BWK/GI/HNO/AN
TROLL-E Airway Mobile Stand, rides on 4 antistatic dual wheels, 2 equipped with locking brakes, for mounting monitors with VESA 75/100 connection, integrated cable conduit in vertical beam and cable manager, load capacity for monitor: max. 15 kg.
Dimensions:
Mobile stand: 670 x 1660 x 670 mm (w x h x d),
Caster diameter: 100 mm
Trolley is delivered unassembled.

including:
Subrack for Mobile Stand
Beam Module, with tube
Drawer
Equipment Rail
Cross Tube Adaptor
Stainless Steel Round Pipe, length 25 cm

Please note: The Monitor 9515 NB is recommended.
The displayed instruments are not included with the instrument cart.

Components/Spare Parts see chapter 7
TROLL-E C-MAC® Mobile Stand, rides on 4 antistatic dual wheels, 2 equipped with locking brakes, with stainless steel tube,
Dimensions:
Mobile stand: 670 x 1500 x 670 mm (w x h x d),
Caster diameter: 100 mm
Trolley is delivered unassembled.
including:
Subrack for Mobile Stand
Top Cover, with guide sleeve
Stainless Steel Tube, length 135 cm
Equipment Rail
Cross Tube Adaptor
Stainless Steel Round Pipe, length 25 cm

Please note: The displayed instruments are not included with the instrument cart.

Components/Spare Parts see chapter 7
Accessories

20 0200 47  Shelf, incl. installation accessories, max. capacity 12 kg, dimensions: 455 x 350 mm (w x d), for use with subracks for Mobile Stands 20020060 and 20020061

20 0200 68  Subdrawer, incl. installation accessories, with lock, max. load capacity within drawer 5 kg, dimensions: 485 x 130 x 350 mm (w x h x d), for use with subracks for Mobile Stands 20 0200 60 and 20 0200 61

11301 BC  ProShield Protective Tube, for flexible telescopes, for single use, unsterile, distal closed, package of 10, for use with Holder for Flexible Endoscopes 29005 IFH

29005 AK  Wire Basket, for accessories, for mounting to equipment rail, dimensions: 300 x 100 x 200 mm (w x h x d)

10330 BE  Fixation Device, for Holder 10330 BC/BD to Standard Equipment Rail 29003 GS, 25 x 10 mm

10330 BC  Holder, for BONFILS Retromolar Intubation Fiberscope 10330 B, made of plexiglass, distal open

29005 IFH  Holder for Flexible Endoscopes, for mounting to standard tubes, incl. installation accessories
COMPONENTS
SPARE PARTS
The chapter “Components / Spare Parts” contains detailed information on KARL STORZ instruments. For easy location and reference, an index is available which lists the order number of the spare parts as well as those of the entire instrument, set or unit.

**Example:**

<table>
<thead>
<tr>
<th>Components / Spare Parts</th>

<td>51, 52</td>
</tr>
</tbody>
</table>

Spare parts

| 495 F Receptacle, diameter 9 mm, for Wolf fiber optic light cable | 10331 BA Tube Holder for ETT, for tube fixation, with O₂ application connection, inner diameter 5 mm |
| 495 G Screw Base, for KARL STORZ fiber optic light cable and Olympus/Winter & Ibe | 10332 BA Tube Holder for ETT, with O₂ application connection, inner diameter 3.5 mm |

Spare parts assigned to instrument with catalog page reference and order numbers for individual components/spare parts.

**Hotline**

Queries concerning products, exchange, maintenance and cleaning can be addressed to the KARL STORZ EP1 Hotline: 07461/708-980, from Monday to Thursday from 7-18 h and Friday from 7-17 h.

- Telepresence

TELEPRESENCE

- Imaging systems
- Illumination

FULL HD – New Vision in Medicine
IMAGE 1 HUB™ HD offers the user the highest image quality for the precise display of even the finest tissue and vascular structures.

IMAGE 1 HUB™ HD enables the connection of the latest HD camera heads and all standard IMAGE1 camera heads. Existing IMAGE1 can be updated to enable HD images to be displayed and HD camera heads to be utilized.

KARL STORZ WIDEVIEW monitors deliver optimal image display. Using the 16:10 aspect provides a larger display window and improves the viewing ergonomics.

KARL STORZ OR1 NEO®

ERGONOMICS, SAFETY AND EFFICIENCY IN THE OR

The KARL STORZ OR1 NEO® objective is to provide an optimal operating room design for performing minimally invasive and conventional surgeries. Customized to meet disciplinary and interdisciplinary needs, the OR1 NEO® operating room concept offers the optimal solution to each requirement for an integrated OR workstation design. The system’s modular design allows all components and functionalities to be integrated in the OR1 NEO® operating room solution and, therefore, become part of the workstation system. Once again, KARL STORZ sets new standards in ergonomics, safety and efficiency in the OR.

- System integration
- Data management and documentation
- Telemedicine

The OR1 NEO® components provide a customized system and compatible applications. Each component offers a reliable solution on its own; the sum of all components forms a complete multifunctional system.
