ENDOFLATOR® 50
The New High-Performance Insufflator with Integrated Heating Element from KARL STORZ
The new high-performance insufflator from KARL STORZ offers optimal user comfort combined with maximum patient safety.

A modern 7" touch screen on this unit displays the precise monitoring data of the CO₂ gas insufflation process. The set values can be precisely adjusted on the touch screen at any time and can, therefore, be optimally adapted to the patient’s specific conditions.

For particularly sensitive areas, such as pediatric applications, the unit offers the PEDIATRIC mode. Its control systems feature a lower insufflation pressure as well as safety limits for pressure (up to max. 15 mmHg) and flow (up to max. 15 l/min). This serves to ensure the safety of delicate patients such as neonates or small children.
The heating element provides additional user comfort. The integrated gas heater enhances the endoscopic view as it greatly minimizes telescope fogging. Furthermore, the filament in the insufflation tube ensures that there is no heat loss in the tube during the insufflation process and that CO$_2$ gas flows into the operative field at a temperature of 37 degrees Celsius.

With a max. 50 l/min in the high-flow mode, the ENDOFLATOR® 50 enables rapid creation of a cavity without compromising safety, which is ensured by the new pressure regulation and the SECUVENT® safety system.

The completely redeveloped control concept ensures rapid generation and stable maintenance of the cavity. In the event of a loss of gas during the procedure (e.g. due to an instrument change or during smoke evacuation), automatic pressure control prevents collapse of the pneumoperitoneum by means of an electronic control.

Furthermore, the SECUVENT® safety system guarantees constant intra-abdominal pressure. Any overpressure is immediately detected and indicated by visual and acoustic warnings and is released automatically if the user does not intervene.

The insufflator from KARL STORZ can be integrated very simply and in a user-friendly manner in the intelligent OR of the future, OR1™, via SCB (Storz Communication Bus).

The storage of personalized procedures with individual pre-set values also helps to make the application faster and more intuitive. Not only does this shorten setup times during the system start, but it also prevents errors and thus increases safety.

Thanks to OR integration, all safety-relevant data can be displayed in the video image to improve ergonomics and convenience for the surgeon. In combination with an SCB-supported camera system, this function can also be used without an SCB computer.

The smooth user interface is ideal for wipe-down disinfection so that the insufflators meet the highest hygiene standards.
ENDOFLATOR® 50 in combination with IMAGE1 S™

When combined with the SCB-supported KARL STORZ IMAGE1 S™ camera control unit and an IMAGE1 camera head, the ENDOFLATOR® 50 can be operated directly via the preprogrammed camera head buttons in future.

The following functions can be programmed on the keys:

- Gas on / off
- Choice between HIGH FLOW / PEDIATRIC mode
- Flow control:
  - PEDIATRIC: 0.5 / 2 / 10 l/min
  - HIGH FLOW: 2 / 20 / 50 l/min
- Pressure control:
  - PEDIATRIC: 5 / 8 / 10 / 12 mmHg
  - HIGH FLOW: 8 / 10 / 12 / 15 mmHg
- Volume reset
Flow properties

For optimal flow results, the entire insufflation chain and not just the unit itself must be considered. Many factors within the chain reduce the flow supplied by the unit. Right at the start of the insufflation chain, many filters significantly reduce the flow. The Luer-Lock connector is a further bottleneck that decreases the flow. Additional instruments and endoscopes in the trocar reduce the flow even further.

The high-flow accessories such as the HICAP® trocars from KARL STORZ and the suggested filters, however, can easily achieve a maximum flow of 50 l/min throughout the entire insufflation chain right up to the patient.

ENDOFLATOR® 50

The ENDOFLATOR® 50 is an insufflation unit for universal use in endoscopic examinations and operations. With its CF classification, this insufflator can also be used without any difficulty in cardiac surgery for room air displacement or for endoscopic vein harvesting.

UI 500 S1

ENDOFLATOR® 50 SCB, with integrated SCB module, power supply 100-240 VAC, 50/60 Hz including:

- Heatable Insufflation Tubing Set, with gas filter, sterile, for single use, package of 3
- Universal Wrench
- SCB Connecting Cable, length 100 cm
- HICAP® Trocar, size 11 mm
Insufflation Tubes with Filters for ENDOFLATOR® 50

For optimal flow results, the entire insufflation chain and not just the unit itself must be considered. Maximum flow is largely dependent on the connected accessories; inappropriate elements can have an adverse effect on insufflator performance. Our newly developed tubing sets are the perfect link for the insufflator systems offered.

These mtp insufflation tubes and filters guarantee the flow rate of ENDOFLATOR® 50 and, combined with the HICAP® trocars from KARL STORZ, ensure an unimpaired CO₂ gas flow up to 50 l/min.

Even when smaller LUER-Lock trocars are used, KARL STORZ ensures that high gas flow rates are maintained. Bifurcated insufflation tubes are available that enable parallel insufflation via two trocars without having to reduce the flow.

The perfect combination

The right accessories are essential to take full advantage of the insufflator’s excellent flow properties.

ENDOFLATOR® 50, in conjunction with the new KARL STORZ S-PILOT™ (UP 501), provides the basis for excellently coordinated smoke evacuation. For further information, please see ENDOWORLD® UNITS 12 (96212020).

KARL STORZ recommends the following configuration for high-flow CO₂ insufflation in laparoscopy:

- **UI 500**  
  **ENDOFLATOR® 50 SCB,** with integrated SCB module, power supply 100-240 VAC, 50/60 Hz

- **031210-01**  
  **Heatable Insufflation Tubing Set,** with gas filter, for single use, hydrophobic on both sides, with 3 m insufflation tube and male Luer-Lock, sterile, for use with insufflation units with a maximum gas flow of 50 l/min

- **26120 JL**  
  **VERESS Pneumoperitoneum Needle,** with spring-loaded blunt inner cannula, Luer-Lock, autoclavable, diameter 2.1 mm, length 13 cm

- **30103 HA**  
  **HICAP® Trocar,** with blunt tip, with HICAP® insufflation stopcock, oval design, size 11 mm, working length 10.5 cm, color code: black-green including:
  - **Cannula**
  - **Trocar only**
  - **Multifunctional Valve**

- **30103 HC**  
  **Same,** with conical tip

- **30103 HP**  
  **Same,** with pyramidal tip
The perfect combination

Even in small cavity surgery in Transanal Endoscopic Operations (TEO®), for instance, the ENDOFLATOR® 50 creates a stable surgical field ("pneumorectum") through high-precision pressure control and thus ensures ideal working conditions. For active smoke evacuation, we particularly recommend the use of a high-flow adaptor (see 24943 S) to ensure a high insufflation flow rate.

KARL STORZ recommends the following configuration for CO₂ insufflation in proctology:

The perfect combination

In endoscopic vein harvesting, the insufflator’s excellent flow performance creates excellent visibility and therefore distinctly improves the working field for the surgeon.

KARL STORZ recommends the following configuration for CO₂ insufflation in endoscopic vein harvesting:

- **UI 500** ENDOFLATOR® 50 SCB, with integrated SCB module, power supply 100-240 VAC, 50/60 Hz
- **031210-01** Heatable Insufflation Tubing Set, with gas filter, for single use, hydrophobic on both sides, with 3 m insufflation tube and male LUER-Lock, sterile, for use with insufflation units with a maximum gas flow of 50 l/min
- **49205 FC** BISLERI Endoscopic Artery Retractor, for harvesting of the arteria radialis, distal width 20 mm, working length 27.5 cm with integrated U-shaped instrument guiding channel, with integrated channel for smoke evacuation, with integrated guide in the handle to be used with a fiber optic light cable, autoclavable, for use with HOPKINS® Telescope 49205 FA
