- Real-time documentation for quality assurance
- Exchangeable, reusable battery – uninterrupted readiness
- Completely watertight (IPX8)
- Universal C-MAC® system interface, tailored to fit your airway management

The New C-MAC® VS (Video Stylet)

The premium class for your airway management

The new C-MAC® VS is a completely new type of video endoscope. Thanks to its sheath and deflectable tip, it combines the advantages of both rigid and flexible intubation endoscopes. Its design is similar to that of the retromolar intubation endoscope, which is of particular benefit for the unexpected difficult airway.

The high-resolution chip at the distal end enables the C-MAC® Video Stylet to deliver remarkable images. Its unique properties make the C-MAC® VS an ideal endoscope for the airway, particularly for use in the emergency room or for routine intubation as well as in patients with cervical spine immobilization and for obstructions in the mouth or restricted mouth opening.

It is recommended to check the suitability of the product for the intended procedure prior to use.
