The HyDOME™ System
The Solution for Hygiene in ERCP
With the introduction of the HYDOME™ system, KARL STORZ has reinforced hygiene standards in ERCP procedures, retained the performance capabilities of a standard system and provided physicians with an option to work with brand new sterile modules every time.

This system, which is unique in the market, features an elevator wire channel that can be brushed, and ensures that neither the elevator nor the elevator wire are potential sources of cross-contamination.
• Sterile elevator module
• Secured positioning with a single click
• Enables brushing of the elevator wire channel

It is recommended to check the suitability of the product for the intended procedure prior to use.
