

ENHANCED, ERGONOMIC VISUALIZATION

VITOM® 3D Technology

Among the persistent challenges to visualization during high-precision surgery is the need for:

- Magnification and illumination to visualize critical structures
- Improved ergonomics for visualization during surgical procedures
- Enhanced communication for staff workflow, resident education, and vendor support during surgery

VITOM® 3D technology addresses all of these challenges by providing a magnified image of the surgical site on an operating monitor. VITOM® allows for an enhanced, ergonomic surgical visualization experience for surgeons, staff, and residents.
