Introduction

In minimally invasive surgery (MIS), excellent endoscopic imaging is a fundamental requirement for excellent surgical results.

Before the endoscopic image is displayed on the monitor, the image is relayed through various links of the imaging chain starting with the light source and ending with the displayed image on the monitor.

All these links form the endoscopic imaging chain. For over 60 years, KARL STORZ has been a worldwide leader in the field of endoscopy. The family-run company, based in Tuttlingen, plays a pioneering role in this branch of the industry and offers complete systems with excellent image quality and perfectly matched components.

The rapid development of camera technology in recent years has resulted in a better view of the surgical field and a much wider treatment spectrum. This ultimately leads to better outcomes for patients. New standards in resolution as well as new technologies and innovative approaches form the basis for this trend.

IMAGE1 S™ 4U – mORe than a camera

The IMAGE1 S™ 4U camera system allows the operating surgeon to make optimal use of the benefits offered by 4K technology. A notable feature is the image quality: High image brightness, impressive colors, greater richness of detail and a significantly improved depth effect characterize this system. Thanks to the system’s modularity, 4U components can be easily integrated into the existing IMAGE1 S™ camera platform. Consequently, the system is still compatible with existing technologies (e.g., rigid, flexible, fluorescence and 3D endoscopy) and can be adapted to meet individual customer needs.

- IMAGE1 S™ 4U impresses with outstanding, razor-sharp images
  - Excellent image brightness
  - First-rate color rendition
  - Greater richness of detail

- Three innovative visualization technologies for tissue differentiation:
  - CLARA: Homogeneous illumination
  - CHROMA: Contrast enhancement
  - SPECTRA*: Spectral color shift and switch

- Easy integration into the IMAGE1 S™ camera platform

The OPAL1® NIR/ICG Technology based on IMAGE1 S™ for the Visualization of the Fluorescent Dye Indocyanine Green (ICG)* in Near Infrared

Based on the IMAGE1 S™ camera platform, KARL STORZ offers a laser-free FULL HD solution for the visualization of ICG in the vascular system, biliary tract, and lymphatic system. Thanks to a new color option, the preferred color for NIR/ICG visualization, i.e. blue or green, can be selected before or during the procedure. Furthermore, S-Technologies can be used under white light or in combination with the NIR/ICG mode. This can provide more intense fluorescence or better background lighting.

- Multidisciplinary camera head with high NIR sensitivity
- Xenon-based technology (no laser safety measures necessary)
- Part of the IMAGE1 S™ camera platform – compatible with IMAGE1 S™ H3-LINK
- All-in-one solution for laparoscopic and open surgery thanks to VITOM® II ICG
- Simplified use of the NIR/ICG functionality via IMAGE1 S™

* Please verify that the fluorescent dye indocyanine green is approved for the respective indication in your country.
