Endoscopes and Instruments for Frontal Sinus Surgery

The endonasal approach to the frontal sinuses requires sound anatomical knowledge and a high level of surgical skills and dexterity. Having the appropriate endoscopes and the right instruments are therefore of utmost importance. The 45° endoscopes allow for an excellent view into the frontal recess while a straight forward view is still possible. The special instruments developed for frontal sinus surgery take these anatomic conditions into account.

- 45° endoscopes available in two versions: A standard version and one with a lateral cable connection
- Endoscope diameter of 4 mm or 2.7 mm
- A large selection of upturned instruments
- Circular cutting punch for resecting horizontally oriented bony lamellae

Management of Bleeding

Safe, reliable and effective

Bleeding in the operative field critically impairs the view at the OR site and, depending on the extent of bleeding, poses a serious risk to the health of the patient. Successful hemostasis – Surgical Bleeding Management – is essential to allow surgery to continue under optimal visibility conditions and thus to prevent complications.

IMAGE1 S™ 4U – mORE than a camera

The IMAGE1 S™ 4U camera system allows the operating surgeon to make optimal use of the benefits offered by 4K technology. A notable feature is the image quality: High image brightness, impressive colors, greater richness of detail and a significantly improved depth effect characterize this system. Thanks to the system’s modularity, 4U components can be easily integrated into the existing IMAGE1 S™ camera platform. Consequently, the system is still compatible with existing technologies (e.g., rigid, flexible, fluorescence and 3D endoscopy) and can be adapted to meet individual customer needs.

- IMAGE1 S™ 4U impresses with outstanding, razor-sharp images
  - Excellent image brightness
  - First-rate color rendition
  - Greater richness of detail

- Three innovative visualization technologies for tissue differentiation:
  - CLARA: Homogeneous illumination
  - CHROMA: Contrast enhancement
  - SPECTRA*: Spectral color shift and switch

- Easy integration into the IMAGE1 S™ camera platform

NAV1® SinusTracker™

The innovative planning software for new routes in FESS surgery

The NAV1® SINUSTRACKER™ planning software enhances the KARL STORZ NAV1® ELECTROMAGNETIC system with the automatic planning of access paths in paranasal sinus and skull base surgery. On the basis of a preoperatively set starting and destination point in the patient’s radiological data, the software allows the surgeon to determine a precise access path that is specially adapted to the individual anatomic structures of the patient. The physician then reviews and modifies the suggested access path at their discretion. Intraoperatively, the selected route is visualized on the navigation screen so that the actual position in the site is under constant control.

Benefits of the NAV1® SINUSTRACKER™

- Multiple Path Planning enables the preoperative planning and naming of up to eight access paths and alternatives
- Intraoperative visualization and control of access paths
- Less preoperative planning required thanks to automatic preplanning
- Flexible, pre- and intraoperative adaptation of the access path possible
