The New Flexible Video Cystoscope

High Performance by Definition
The New Flexible Video Cystoscope HD-VIEW™

New technologies and extensive market experience combined in one product

The new flexible cystoscope is able to meet increasing demands on image quality in flexible cystoscopy as well as percutaneous applications. In addition, the new suction valve provides an effective method for rapid emptying of the bladder. The distal tip has been redesigned to enable smoother insertion.

Integrated light source

Suction valve port

Supply cable in the center facing upwards

BRILLIANT.

EASY.
Detachable Luer port

Seal for suction valve port

Bayonet lock

Larger working channel

New camera chip – HD resolution

Distal tip with atraumatic shape

FAST.
BRILLIANT with excellent image quality

**New camera chip:** Replacing the previous CCD chip technology with the future-oriented CMOS-technology delivers a HD resolution for brilliant imaging. The details and colors of the endoscopic image are clear and lifelike and thus allow – in combination with the KARL STORZ S-Technologies – the optimal diagnosis, treatment and follow-up care of tumors.

- **Noticeably higher resolution thanks to camera chip in high definition**

**Integrated light source:** An LED has been integrated into the handle. Combining the HD chip quality with LED technology delivers much brighter images than those provided by chip-on-the-tip cystoscopes. Furthermore, an external light source is no longer required. This makes the previous model’s bulky plug geometry with extra camera and light cables obsolete.

- **Integrated LED technology with automatic exposure**

EASY thanks to convenient handling

**Supply cable:** The new HD-VIEW™ requires only one supply cable for the camera control unit. The cable is positioned in the center and exits from the top of the handle so that ergonomic handling for both left- and right-handed users is ensured. Moreover, a special light cable as well as manual white balance is no longer necessary. The cystoscope works on a plug-and-play system that is easy to use and balanced in the hand.

- **Central supply cable**

**Distal tip:** A new atraumatically shaped tip makes insertion into the urethra easier so that patient comfort is increased.

- **Atraumatic 10.9 Fr. tip**

**Detachable LUIER port:** Various attachments, with or without stopcocks, are available to the user. Separate steam sterilization of these stainless steel parts is also possible.

- **Detachable LUIER port for better reprocessing**
FAST thanks to optimized suction and working channel

**Suction valve port:** The HD-VIEW™ is equipped with a suction valve that allows rapid treatment and emptying of the bladder. The user is able to suction urine and even smaller tissue fragments from the bladder. Depending on user requirements, a sterile single-use suction valve or a reusable valve can be utilized. If suction is not required, a seal is available to close off the channel.

- **Suction valve for rapid bladder evacuation**

**Larger working channel:** The new HD-VIEW™ features a larger working channel to ensure better irrigation, even when instruments are already inserted.

- **7 Fr. working channel**

Versatile Visualization Options for Surgery and Diagnostics

The video cysto-urethroscope in combination with the IMAGE1 S™ camera system

For clear visualization and easier differentiation of tissue structures

- Side-by-side view: Parallel display of the standard image and visualization modes possible
- Brilliant imaging in HD

CLARA and CHROMA
IMAGE1 S™ offers the possibility to combine the CLARA and CHROMA technologies. In this mode, the image is homogeneously illuminated and tissue structures are clearly enhanced by CHROMA.

SPECTRA A*
In SPECTRA A*, reds are removed by spectral filtration. This color change is achieved by shifting color channels. The most delicate red structures, such as blood vessels and the mucosa, are clearly displayed in greenish-blue.

* not for sale in the U.S.

SPECTRA B*
SPECTRA B* reduces the red tones and intensifies the green-blue spectral range. The image background becomes greenish, highlighting blood vessels and capillaries. Nevertheless, the original color impression is largely maintained.

* not for sale in the U.S.
Compatibility

For use with the IMAGE1 S™ Camera Control Unit or TELE PACK +

Flexible Video Cysto-Urethroscope

High Performance by Definition

The new HD-VIEW™ cystoscope is available as 2 different sets:

11272 VH K Flexible Video Cystoscope HD-VIEW™, Set, with positive deflection mechanism, with suction channel and integrated light source, deflection of distal tip 210°/140°, direction of view 0°, angle of view 100°, working channel inner diameter 7 Fr., sheath size 16 Fr., working length 37 cm, for use with IMAGE1 S™

The following accessories are included in delivery:

11272 VHUK Same, with contrapositive deflection mechanism, with Double LUER Port 11014 LU
Optional Accessories:

11301 CE1* **Suction Valve**, for single use, package of 20

11301 CB1  **Suction Valve**, reusable

11301 P  **Seal for Suction Valve Port**, to seal the suction channel, for use with flexible Video Cystoscopes HD-VIEW™ 11272 VH/VHU

11014 L  **LUER Port with Stopcocks**, attachment to working channel, for the connection of irrigation tubes and the insertion of instruments

11014 LU  **Double LUER Port**, attachment to working channel, for the connection of irrigation tubes and the insertion of instruments

11014 DS  **Seal Working Channel Connector**, seal with hole, package of 10, for use with LUER Ports 11014 L/LU and Cleaning Adaptor 11014 RA

27023 FE  **Grasping Forceps for Small Fragments**, 5 Fr., single action jaws, flexible, length 73 cm

27023 ZE  **Biopsy Forceps**, 5 Fr., single action jaws, flexible, length 73 cm
